

Welcome to Botany 401 - Vascular Flora of Wisconsin

Brandon Corder, instructor

Today's agenda

1. Introduction to the course and instructors
2. Overview of the flora of Wisconsin
 - With sneak peeks of some of our future topics!

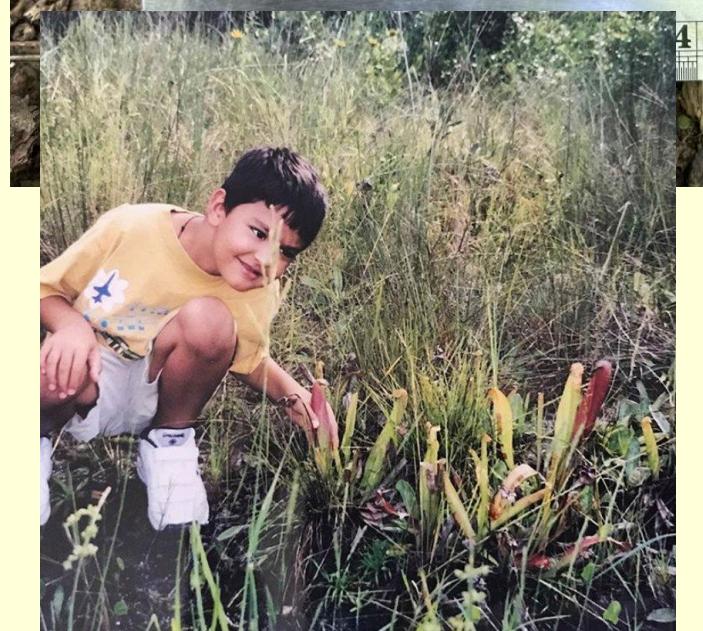

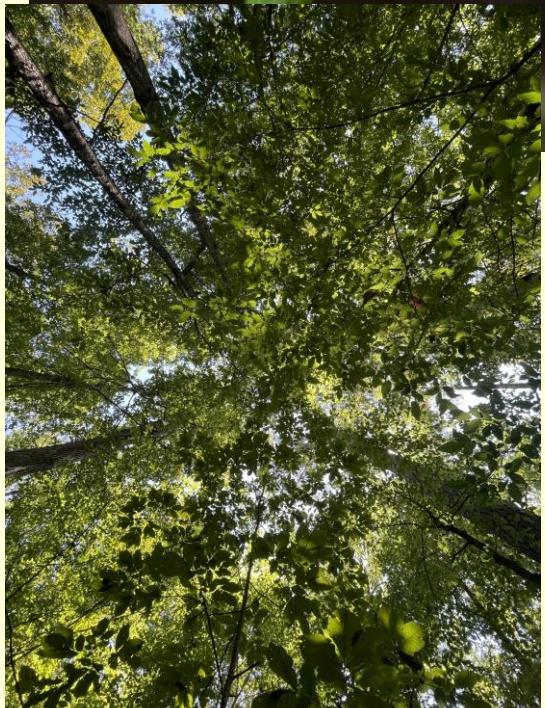

Our Course: Instructors

Brandon Corder (he/him)

6th year PhD candidate (Botany)
Originally from Florida
Study orchids in the Great Lakes
I love Wisconsin!

bcorder@wisc.edu

Our Course: Instructors

Patty Chan (she/her)

5th year PhD candidate
(Botany)
Originally from New Jersey
Studies plants in Australia!

Our Course: Layout

- Daily lectures: 11:00-11:50am (recorded)
- T/R Labs (4 in person, 2 remote): 2:00-4:00pm
 - Some in **Birge 243**, others off-campus (see schedule)

Our Course: Grading

- 2 assignments (50 pts) – ways to get to know more about flora / communities in a self-led way
- 1 ongoing “project” (100 pts) – experience using iNaturalist app + with making labels for field-collected specimens
- 1 Field “exam” – identifying plants in the field
- Maintaining a field notebook
- Short questions following each lecture (on your own, up to 24 hours after) – **check after class under Assignments in Canvas!**

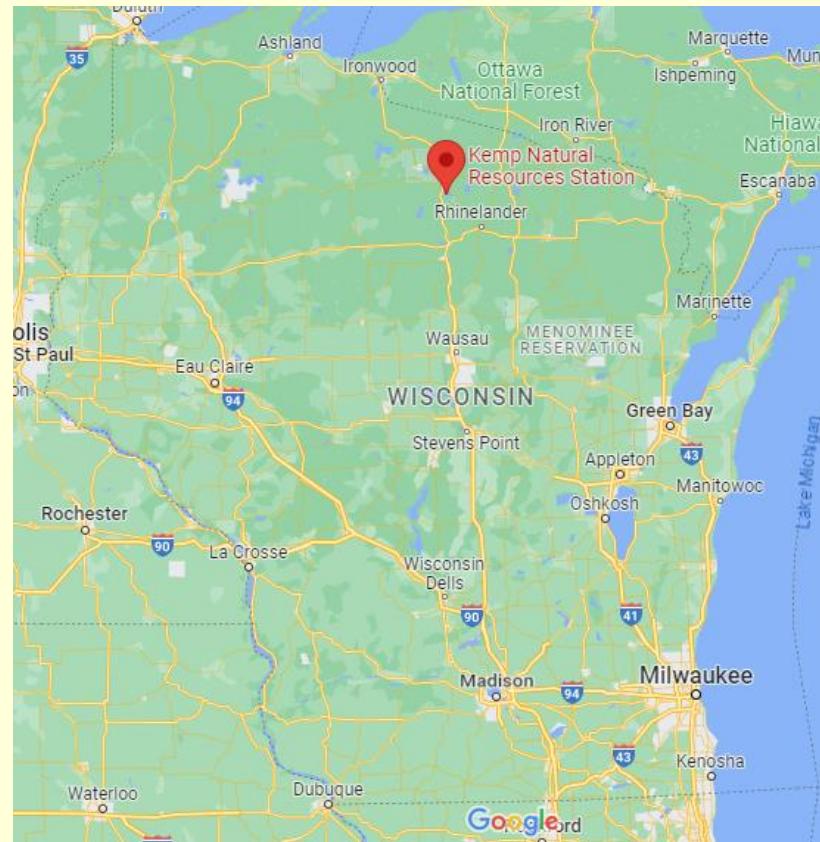

Our Course: Kemp Station Trip

June 12-16: field trip to Kemp Natural Resources Station in Woodruff, WI

Field exam administered
Some mini-workshops!

Transportation / lodging costs covered – food cost split among us

More info to come soon

Our Course: Other Info

No required texts – **but, explore the resources on Canvas**

Short time span! Make sure late work gets in; coordinate with TA, Patty

Ask for help! We love to talk plants

On notetaking/exams for this class: point isn't to memorize everything on every slide, but to build familiarity with terms/concepts/patterns and then give the knowledge of how to start a life-long journey to familiarize yourself with any flora!

Corallorrhiza striata, striped coralroot
Orchidaceae

Papers on Wisconsin's Flora and Vegetation (for your own fun)

0 items selected

Name	Date Created	Date Modified
 Anderson & Hlina, 2019 - Preliminary report on the barrens flora of the Northwest sands region of Wisconsin.pdf	Thursday	Thursday
 Beals & Cottam, 1960 - The forest vegetation of the Apostle Islands, Wisconsin.pdf	Thursday	Thursday
 Bray & Curtis, 1957 - An ordination of the upland forest communities of Southern Wisconsin.pdf	Thursday	Thursday
 Bray, 1960 - The composition of savanna vegetation in Wisconsin.pdf	Thursday	Thursday
 Christy & Meyer, 1991 - Bryophytes of aligic talus slopes in Wisconsin's Driftless Area.pdf	Thursday	Thursday
 Cochrane & Iltis, 2000 - (Book) Atlas of the Wisconsin Prairie and Savanna Flora.pdf	Thursday	Thursday
 Cole et al., 1979 - Bryophytes of the Kickapoo River Valley, Southwestern Wisconsin.pdf	Thursday	Thursday

Files on Canvas: some papers on Wisconsin flora for you to explore on your own!

III. Other Resources

Things you will probably use often:

[WisFlora](#) - Aggregated information and collections of plants from Wisconsin. Also note the materials under the tab "Checklists", which includes county checklists.

[Minnesota Wildflowers](#) → - a great online resource to vascular plants found in Minnesota. Includes a search function and Advanced Search in the top right.

[Michigan Flora](#) → - web version; physical copies online. Browse by family or county to find Michigan's plants.

[Wisconsin DNR State Natural Areas](#) → - listed by county

Other things you may use:

Milwaukee Public Museum checklists of Wisconsin [mosses](#) → and [liverworts](#) →

[Missouri Botanic Garden Angiosperm Phylogeny website](#) → - A huge, huge database of plant phylogenies. Lots of technical terms, but lots of rabbit holes to go down.

[Flora of North America](#) → - incomplete, but for some families you can search by county.

Front page of Canvas: links to some resources we will use / you may use in the future

Botany 401

Vascular Flora of Wisconsin

Objectives for the course

1. Become familiar with a local flora:
species diversity, biogeographical
patterns, rarity, natural history, community
types, etc.

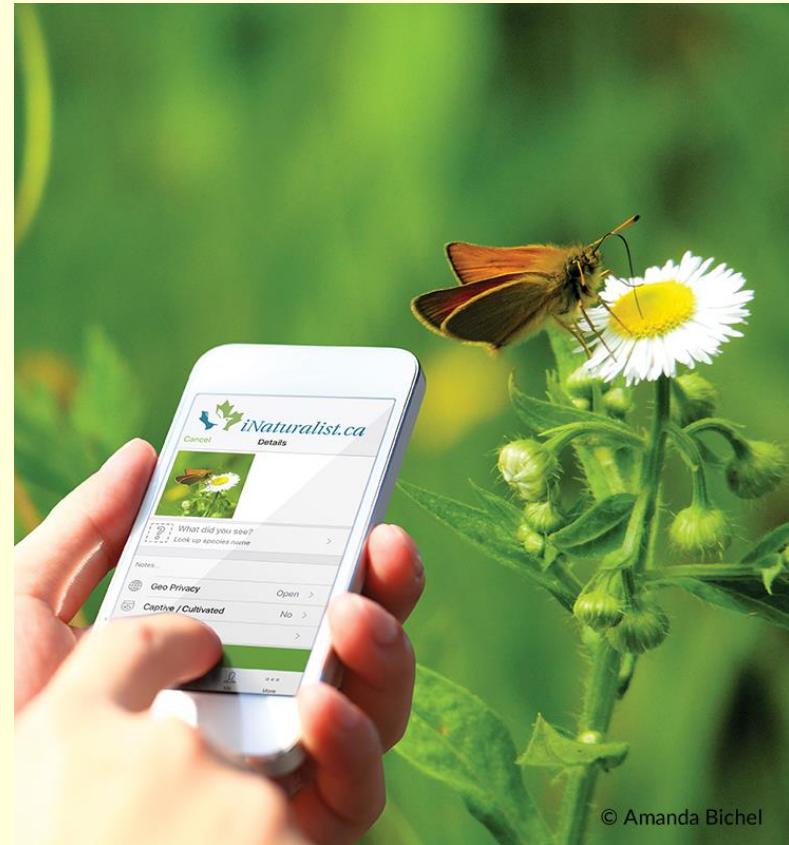

Iris lacustris, dwarf lake iris
Iridaceae

Botany 401

Vascular Flora of Wisconsin

Objectives for the course

2. Learn skills of identifying organisms, in the field or in the lab – includes use of technical keys, manuals, etc.
3. Utilize and contribute to community science platforms (e.g. iNaturalist) or natural history collections (e.g. herbarium collections)

© Amanda Bichel

Botany 401

Vascular Flora of Wisconsin

My goals for the class:

1. Have fun! Plants are beautiful and learning more about our natural world is fun
2. To learn more about Wisconsin and especially what makes our state unique
3. To learn skills that can be applied after the class: your next job, hobby, etc.
4. **To build a welcoming community in our classroom for folks of all different backgrounds / experience levels**

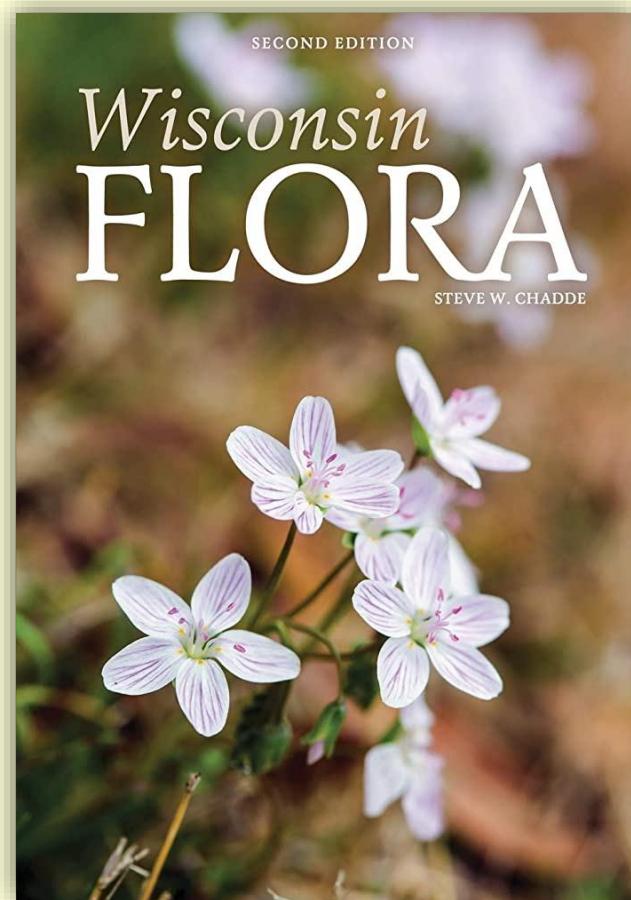

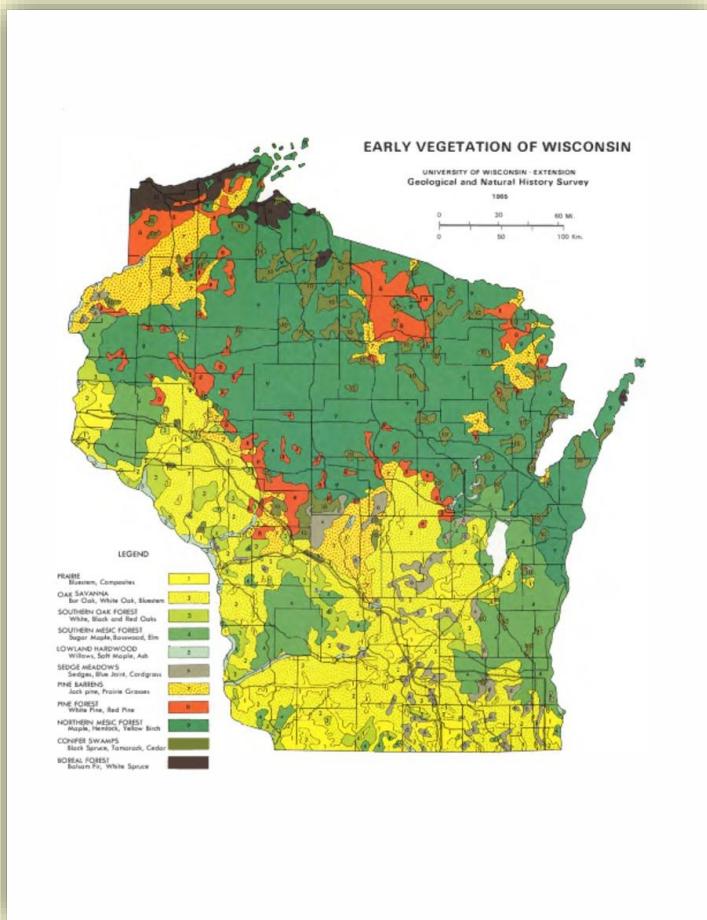

© Skillet Creek Medi

What is a Flora?

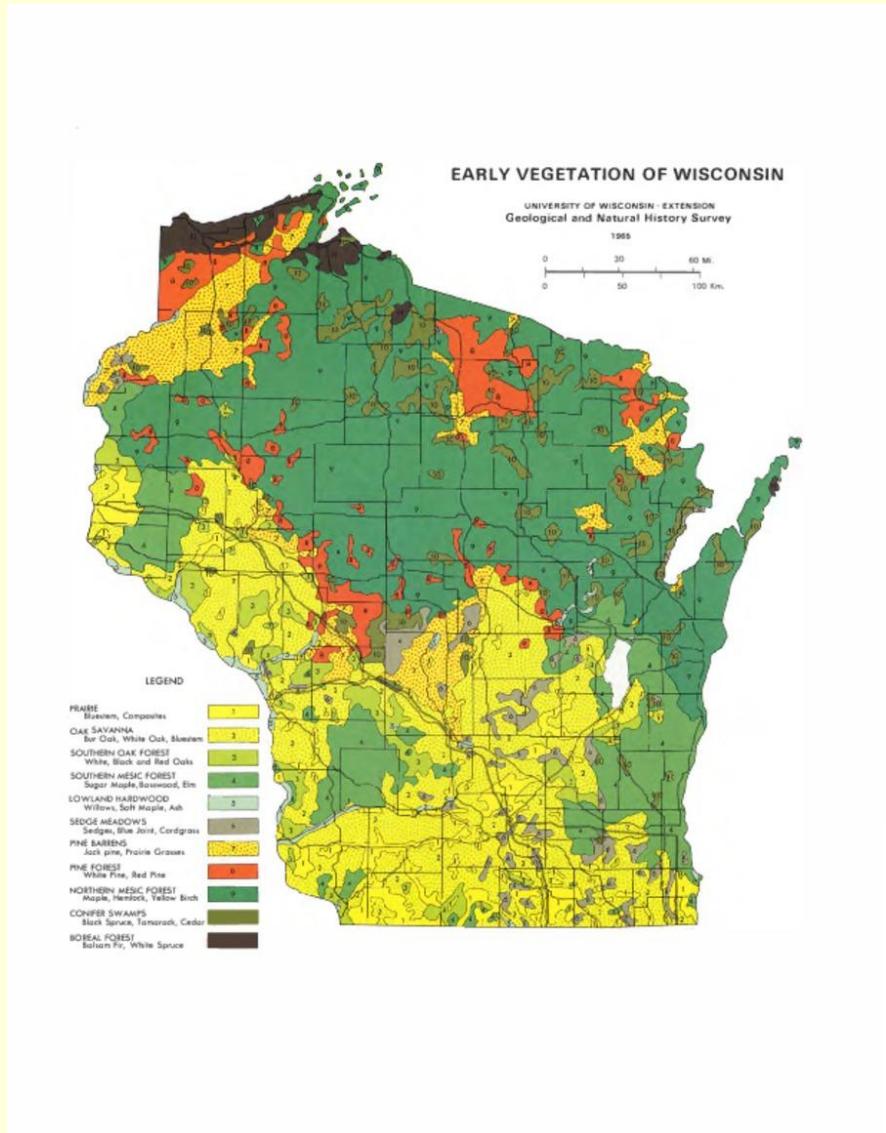

FLORA:

- (1) The plants of a particular region, habitat, or time period
- (2) A work that lists all the plants of a particular region, period, etc.

Floras include:

- Plants that occur naturally (**native**) in that region
- Plants that are non-native (**introduced**, or **invasive**) that are found wild in a region
- May include plants that occur naturally but ephemerally (**waifs**) or are otherwise not established, or recently extinct (**extirpated**) plants

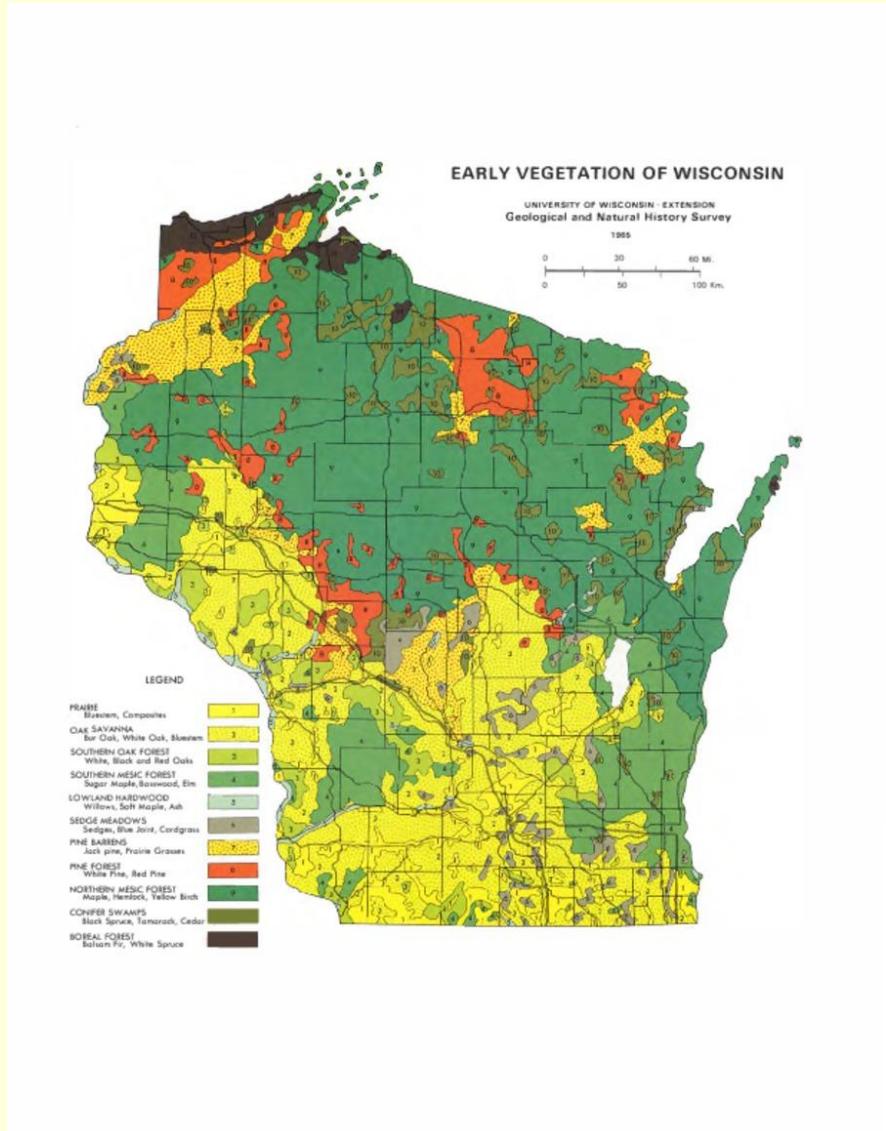

Floras often do not include:

- Plants only found in cultivation (e.g., **agricultural plants**, **ornamental plants**), unless they escape cultivation
- Unsubstantiated claims, depending on its evidence / veracity

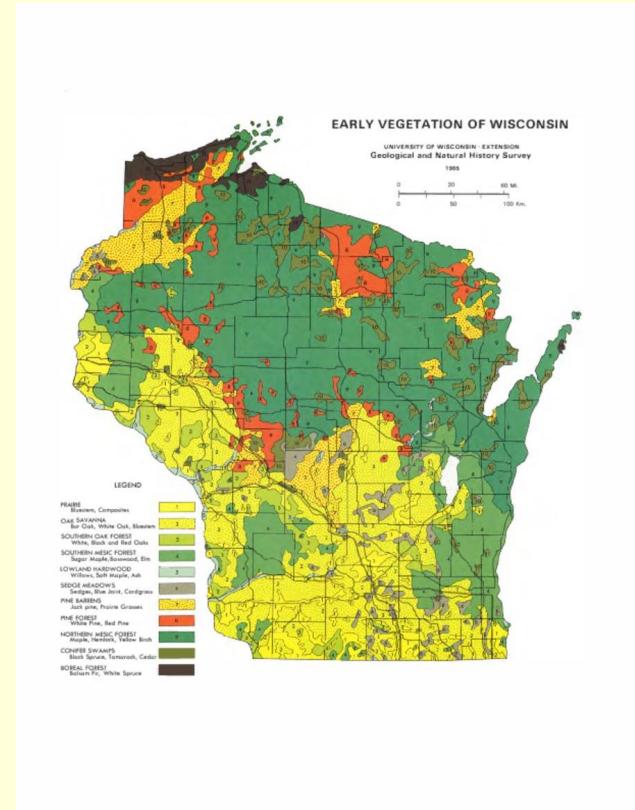

Context is important!

All can be more complicated to discern than you might think

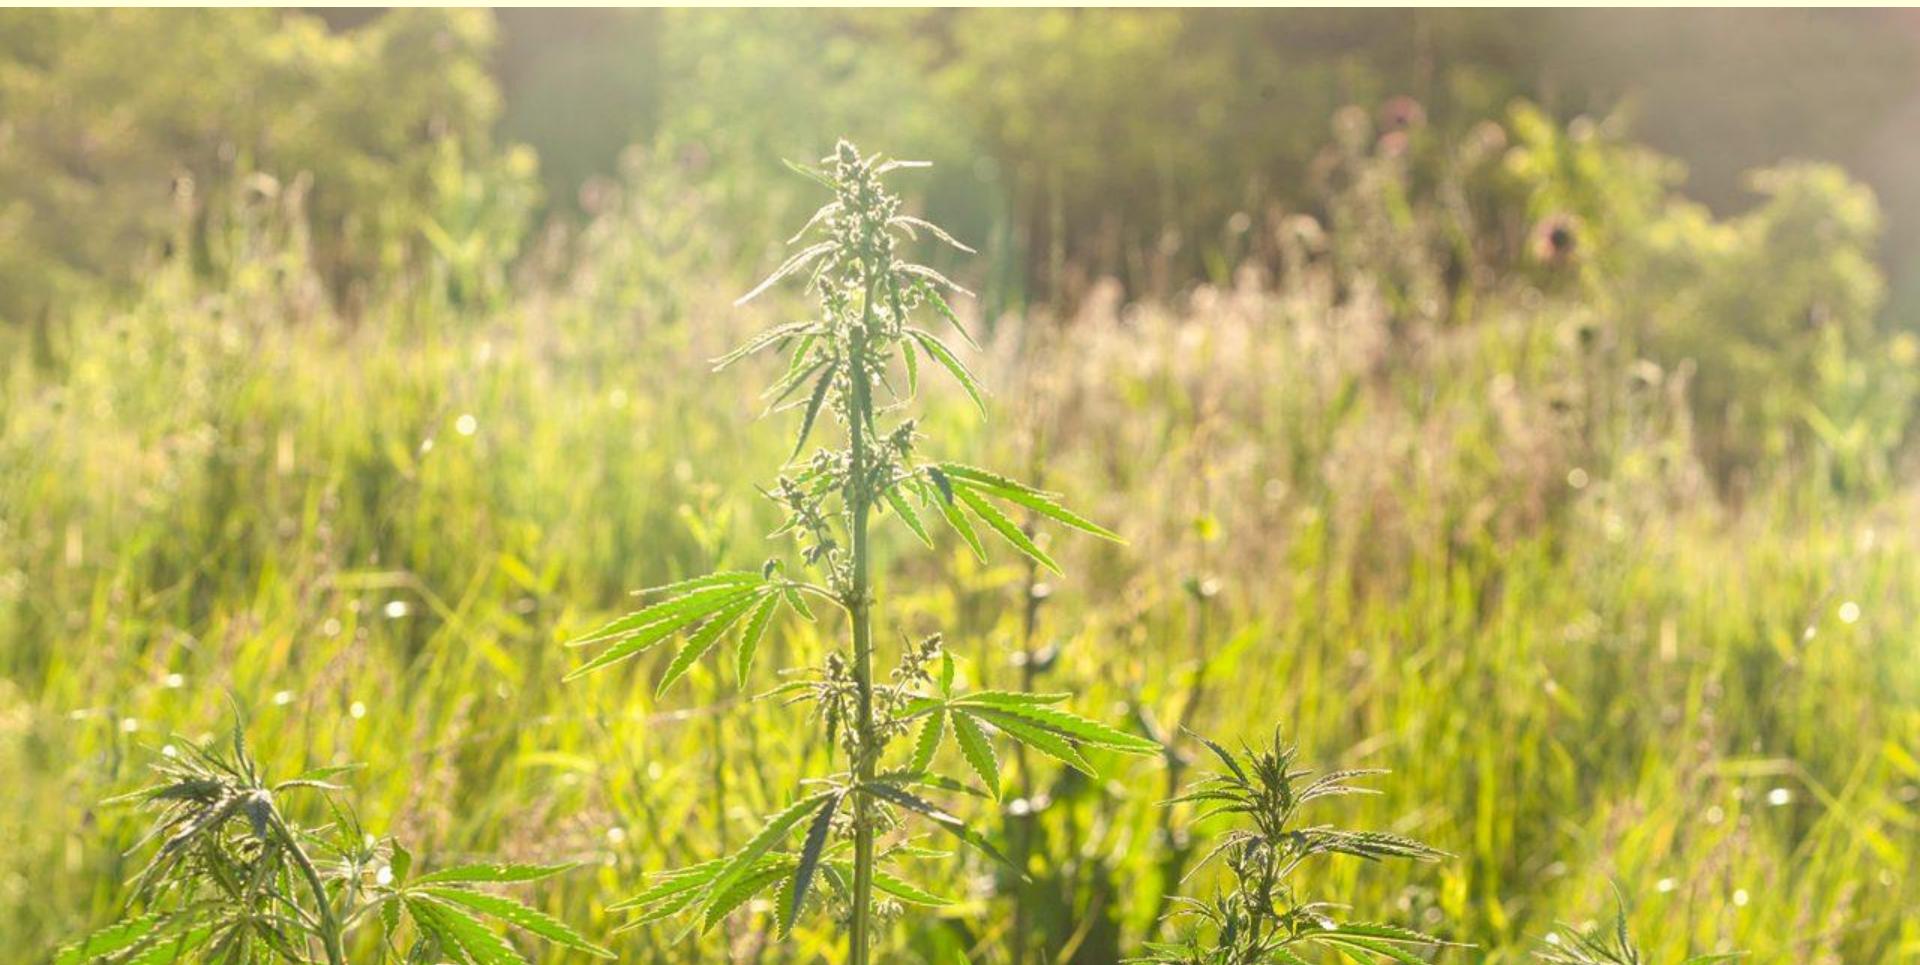

Revisiting our list from a few slides ago:

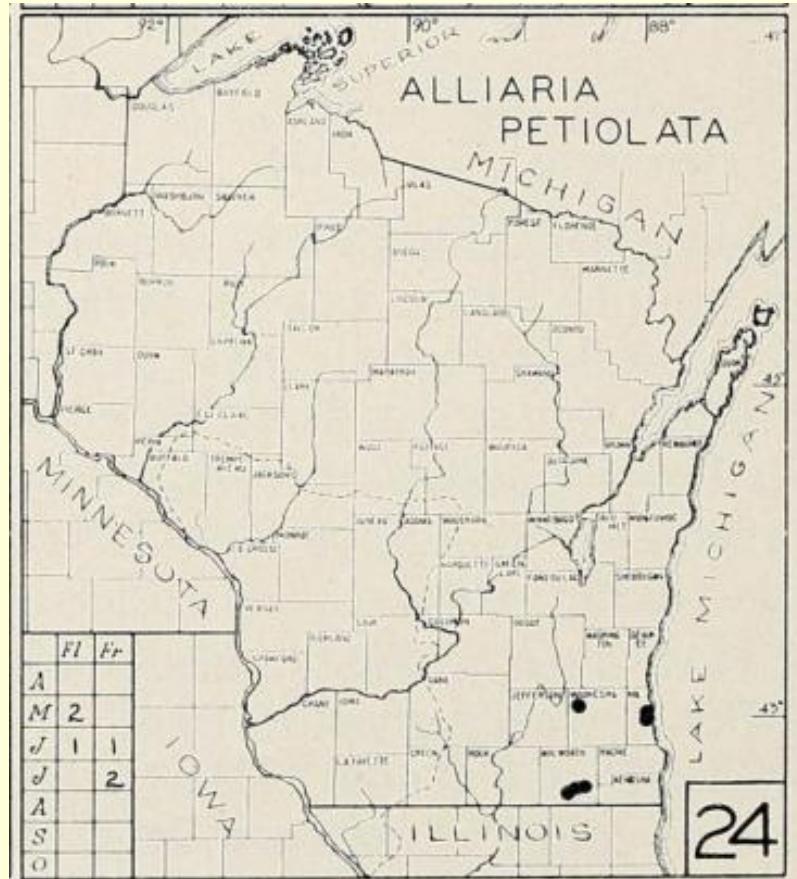

- Plants that occur naturally (**native**) in that region
 - Is it truly native?
 - How long has it been here?
- Plants that are non-native (**introduced**, or **invasive**) that are found wild in a region
 - Is it an ancient or a recent introduction?
 - Was it introduced by humans or by natural means?
- May include plants that occur naturally but ephemerally (**waifs**) or are otherwise not established, or recently extinct (**extirpated**) plants
 - Is it truly extirpated? How long must pass before it isn't included in a flora?
 - What is a waif?

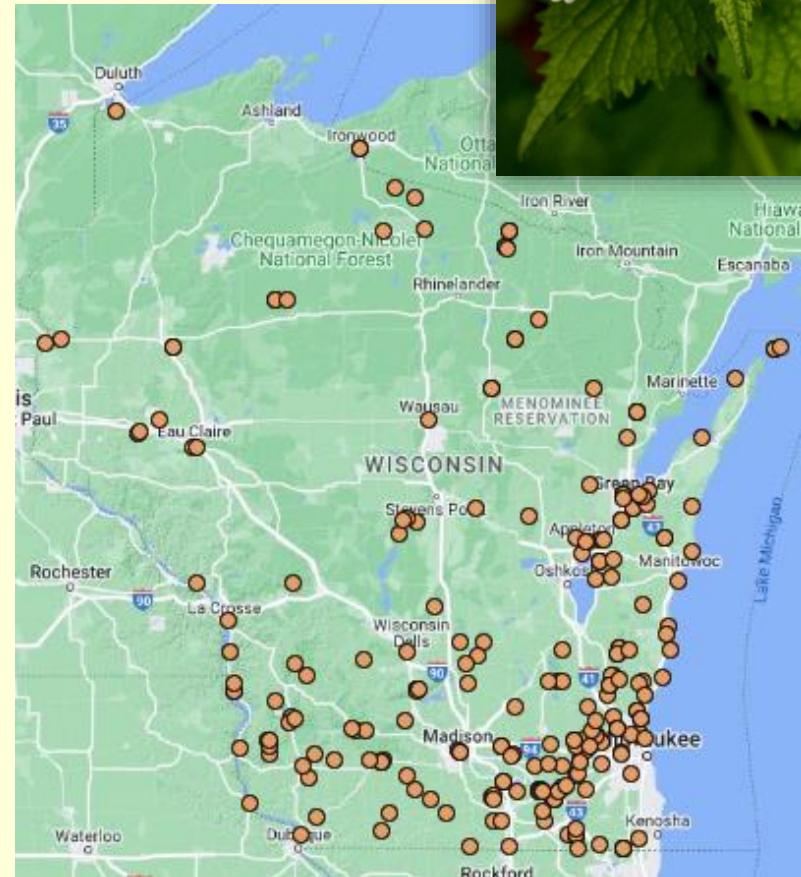

Feral hemp (*Cannabis sativa*), cultivated in Wisconsin but occurring in a natural (weedy) context – Yes in a Flora

Plant distributions change drastically over time, like in spread of non-native plants, (garlic mustard, *Alliaria petiolata*)

Alliaria petiolata in Patman & Iltis, 1960 -
Preliminary reports on the flora of Wisconsin

Alliaria petiolata in WisFlora database (accessed
May 2023)

Various factors also affect the distributions of plants considered native to a region: Northward spread of autumn lady's tresses, *Spiranthes ovalis* var. *erostellata*

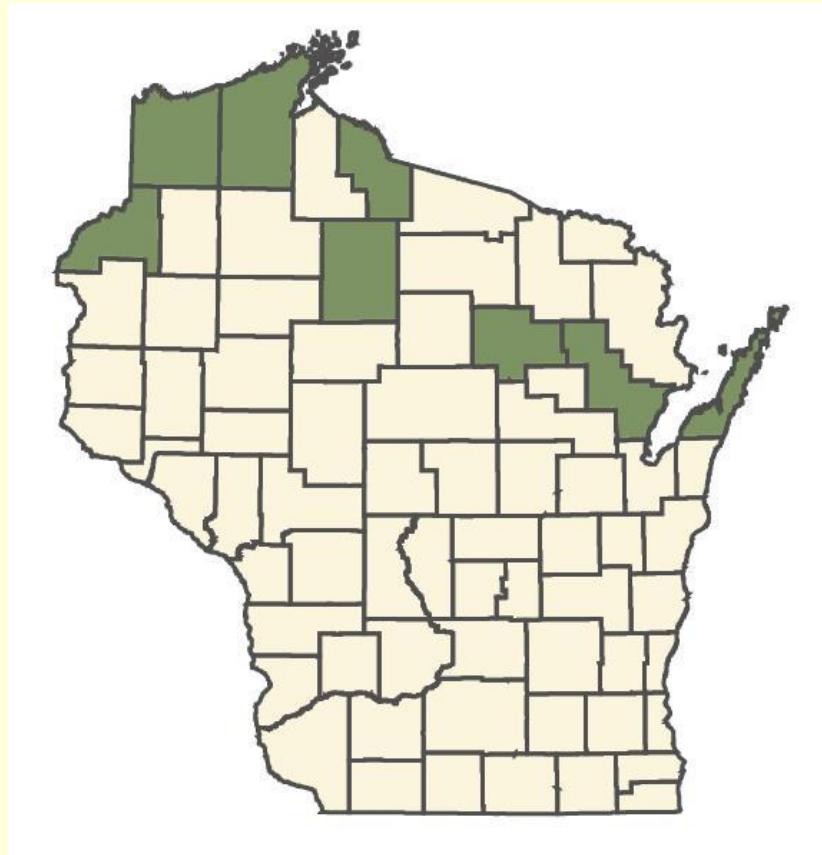

Spiranthes ovalis var. *erostellata* in WisFlora database (accessed May 2023) – considered native

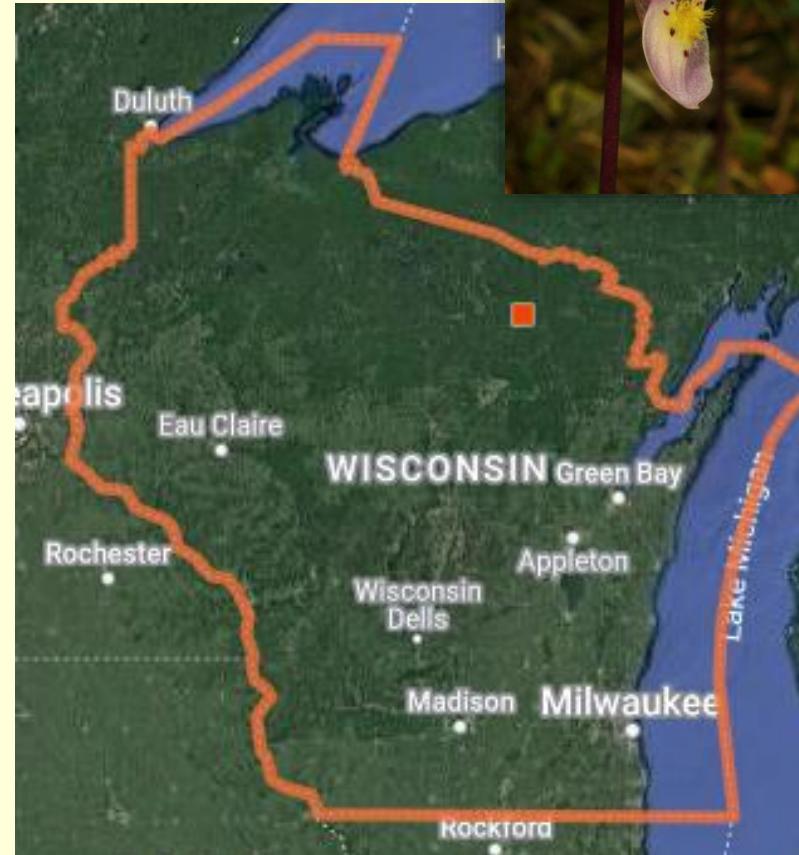

Spiranthes ovalis var. *erostellata* observations on iNaturalist (accessed May 2023)

Various factors also affect the distributions of plants considered native to a region: Decline of Eastern fairy slipper, *Calypso bulbosa* var. *americana*

Calypso bulbosa var. *americana* in WisFlora database (accessed May 2023) – 1897-1996

Calypso bulbosa var. *americana* observations on iNaturalist (accessed May 2023) – 1 obs post 1996

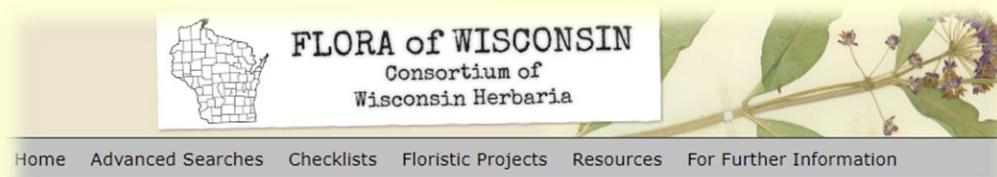

The importance of a Flora:

- Baseline for understanding our plant distributions and status over time
 - Where do they occur? Are they increasing or decreasing in number?
 - Crucial for conservation, mitigating future climate change scenarios, identifying land for conservation
- Understanding the taxonomy and diversity of plants in a region
 - Identification of regionally unique taxa, species new to science, etc.
- Practical identification of plants in a consistent, reliable way (for land managers, scientists, enthusiasts, interested folks in the public)
- Sparking all sorts of other scientific or public inquiry!

Does Wisconsin have a published “Flora”?

Not exactly – but it is in the works!

Various field guides also cover Wisconsin’s plants

Welcome to the Online Virtual Flora of Wisconsin

This site is a collaborative effort between the herbaria of the UW-Madison (WIS) and the UW-Stevens Point (UWSP), along with most of the other herbaria located in the state of Wisconsin. It contains information on each of the more than 2600 vascular plant species that occurs in Wisconsin, including photos, distribution maps, specimen records, and more.

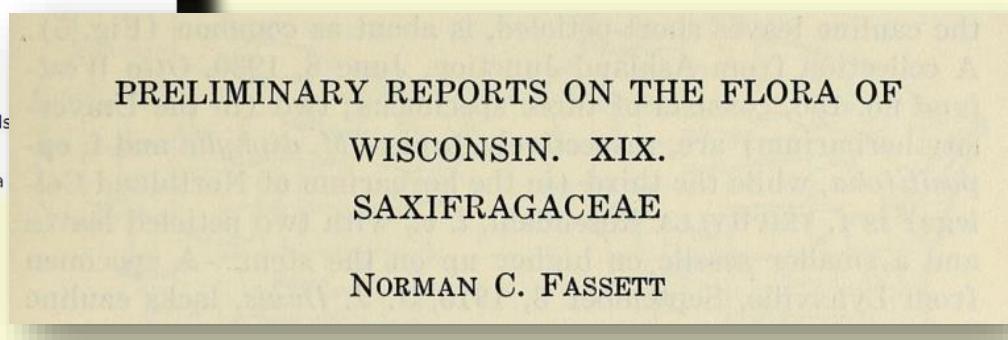

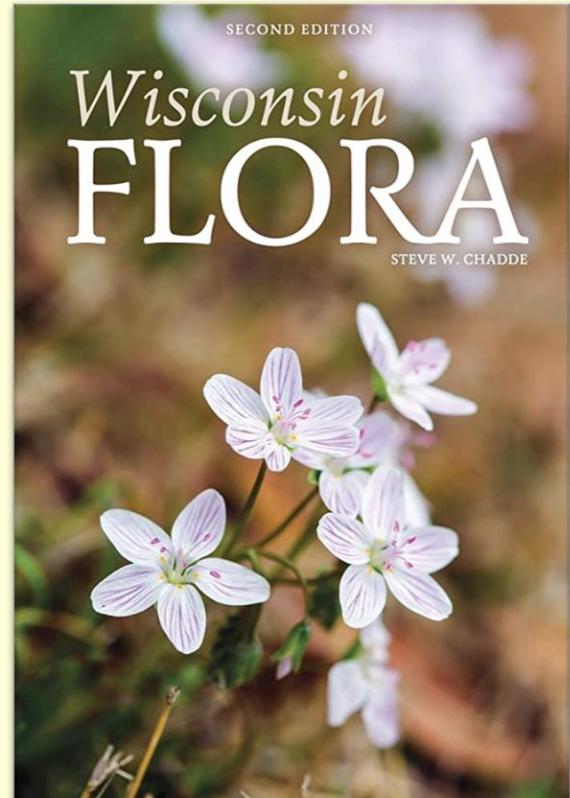

Quick Search

- Enter a genus, species, or common name to view the species description pages.
- View detailed species descriptions, photos, interactive maps, and links to specimen records and additional information.

Advanced Searches

- See Advanced Searches tab above to **Search for Specimen Records** and to **Browse the Image Library**.
- Search, view, and download nearly 400,000 in-state herbarium specimen records thousands of images.

Checklists (e.g., County Floras, Wildflowers by Color) are under development. Take a

Hydrocotyle L. Marsh- or Water-pennywort

Infl gen a simple umbel, sometimes proliferous, pedis ascending to reflexed; fls white, greenish, or yellow; fr orbicular or ellipsoid, ± flattened laterally, dorsal surface rounded or acute, with narrow, acute ribs, or the ribs absent; low, ann or per (ours) herbs, glab (ours) or hairy, with creeping or floating sts and petiolate, often peltate lvs. (Gr *hydro*, water, and *kotyle*, flat cup, referring to the peltate lvs). *H. umbellata* L., with peltate lvs and long-ped fls, occurs in s OR but is not known to reach our area.

1a Lvs not peltate, bls rotund-reniform, gen cordate, 1–6 cm wide, margins 5–6-lobed nearly to middle, petioles weak, mostly 0.5–3.5 dm; peduncles much < petiole, axillary, 1–5 cm; umbel 5–10-fld; fr suborbicular, 1–3 mm, ribs absent; pls ± aquatic, marshes, lakeshores, and wet ground; w Cas, WA to CA and AZ, e in s US to c and e N Am; widely intro elsewhere

1 H. ranunculoides L. f.

1b Lvs peltate, bls ± orbiculate, never cordate, gen 1–6 cm wide, margins coarsely and weakly crenate to shallowly 8–14-lobed, petioles mostly 0.3–1 dm; peduncles gen = petioles, axillary, 1.5–20 cm; umbel to 15-fld; fr elliptic, 1–3 mm, ribs prominent; pls ± terrestrial, wet areas; historic (1943) in Benton Co, OR, otherwise Coos Co, OR to CA, e across s US to Atl; cosmopolitan

2 H. verticillata Thunb.

Opopanax (Torr. & A. Gray) Miq.

Hydrocotyle Linnaeus 1753 (WATER-PENNYWORT)

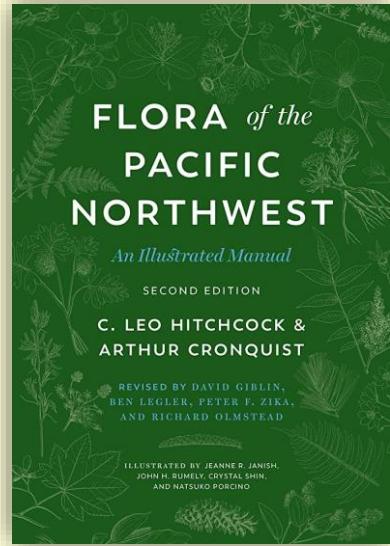

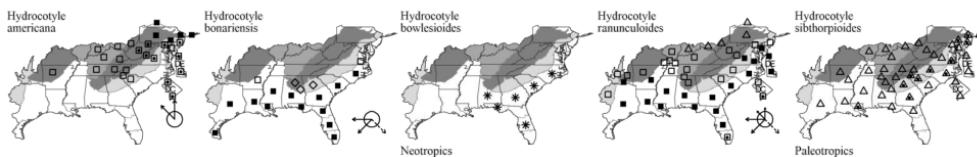

A genus of about 180 species, perennial and annual herbs, cosmopolitan (especially Australia) (Plunkett et al. 2018b). Molecular analyses have clarified that the affinities of *Hydrocotyle* lie with the Araliaceae rather than the Apiaceae (Downie et al. 1998; Chandler & Plunkett 2004). References: MC; Plunkett et al (2018b) in Kadereit & Bittrich (2018).

- 1 Leaves peltate, lacking a sinus extending to the attachment of the petiole.
 - 2 Inflorescence umbellate; leaves 1–4 (–7) cm wide *Hydrocotyle umbellata*
 - 2 Inflorescence verticillate or umbellate-verticillate (when first developing sometimes appearing merely umbellate); leaves 1–15 cm wide.
 - 3 Inflorescence compound, the main inflorescence axis with nodes which produce verticils or umbels of pedicellate flowers, the inflorescence nodes also producing branches which themselves produce verticils or umbels of flowers; leaves (1–) 4–15 cm wide *Hydrocotyle bonariensis*
 - 3 Inflorescence verticillate, all the flowers borne sessile or on pedicels on the unbranched inflorescence axis; leaves 1–6 cm wide.
 - 4 Flowers and fruits pedicellate, the pedicels 1–10 mm long *Hydrocotyle tribotrys*
 - 4 Flowers and fruits sessile or subsessile *Hydrocotyle verticillata*
 - 1 Leaves not peltate, a sinus extending to the attachment of the petiole.
 - 5 Central leaf lobe notably more distinct than the other lobes (the sinuses on either side extending 1/3 to 3/4 of the way to the petiolar attachment); stems and petioles fleshy..... *Hydrocotyle ranunculoides*
 - 5 Central leaf lobe not more distinct than the other lobes (the sinuses on either side extending 1/10 to 1/4 the way to the petiolar attachment); stems and petioles filiform.
 - 6 Fruiting umbels on peduncles 1–3 mm long;
 - 6 Fruiting umbels on peduncles 9–24 mm long
 - 7 Leaves 5-lobed, 15–30 mm wide.....
 - 7 Leaves 7-lobed, 5–13 mm wide.....

* *Hydrocotyle bowlesiaoides* Mathias & Constance. **Hab:** Lawns. **Dist:** Native of Costa Rica and Panama (naturalized in South America, se. United States, and New Zealand). See Anderson (1983) for discussion of the species' occurrence in Thomasville, Thomas Co. GA. See Krings, Newton, & Liles (2017) for the first report for NC (Scotland County). **Comm:** Reported for Panhandle FL (Wunderlin & Hansen 2011). **Syn:** = Fl7, K1, K3, K4, MC, Meso4.1, WH3. **NatureServe GNR** (Not Yet Ranked).

Hydrocotyle ranunculoides Linnaeus f. SWAMP WATER-PENNYWORT. **Hab:** Stagnant to (less commonly) swiftly flowing waters of swamps pools, backwaters, blackwater streams, sometimes forming floating mats. **Dist:** NY, IL, MO, and KS south to s. FL and se. TX; BC south to CA, AZ, Mexico, central America, and South America. **Phen:** Apr-Jul. **Syn:** = Ar, C, F, Fl7, G, GrPl, GW2, II, K1, K3, K4, MC, Meso4.1, Mo2, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV. **NatureServe G5** (Secure).

* *Hydrocotyle sibthorpioides* Lamarck. LAWN WATER-PENNYWORT. **Hab:** Lawns, pond margins, cracks between paving stones. **Dist:** Native of Asia and Africa. **Phen:** Mar-Sep. **Comm:** Greatly increasing as a lawn and garden weed. **Syn:** = Ar, C, F, Fl7, G, K1, K3, K4, MC, Pa, RAB, Tn, Va, WH3, WV. **NatureServe GNR** (Not Yet Ranked).

Flora of the Southeastern United States

Edition of April 13, 2022

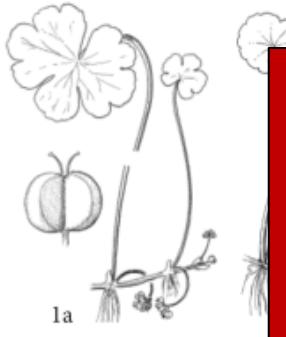

by Alan S. Weakley and the Southeastern Flora Team*

University of North Carolina at Chapel Hill Herbarium (NCU)

Flora of the Southeastern United States

Edition of April 13, 2022

by Alan S. Weakley and the Southeastern Flora Team*

University of North Carolina at Chapel Hill Herbarium (NCU)
North Carolina Botanical Garden
University of North Carolina at Chapel Hill
Campus Box 3280
Chapel Hill NC 27599-3280

Produced from the FloraManager database system
by Michael T. Lee

How do we know what plants are in our state?

- First: someone must observe something! (some collection bias in where this happens based on population, proximity to a university, time of year, how “cool” a place is)
- Next, a collection or collections are made with important “metadata”: who, what, when, where, etc.
- Specimen is identified using existing resources in the field or in the herbarium
- Many herbarium specimens aggregated together to “map” the flora

Cypripedium acaule Ait.

Milwaukee, Wis.

I. A. Lapham

Historical labels:

- Scientific name & author
- Vague location
- Collector
- Date (sometimes)

We will get experience
making good labels later
this semester!

Orchidaceae

Pink lady's-slipper

Cypripedium acaule Ait.

WIS

Door County. Town of **Sturgeon Bay**. Ridge/swale community south of Lake Lane. N44.790371 W87.323485. Elev. 619 ft.

Uncommon pink-flowered slipper orchid growing on an old sandy beach ridge beneath large eastern hemlocks, white pines, and northern white cedar. Other plant associates include *Lysimachia borealis*, *Polygonatum paucifolium*, and *Lycopodium* spp. Digital photos taken.

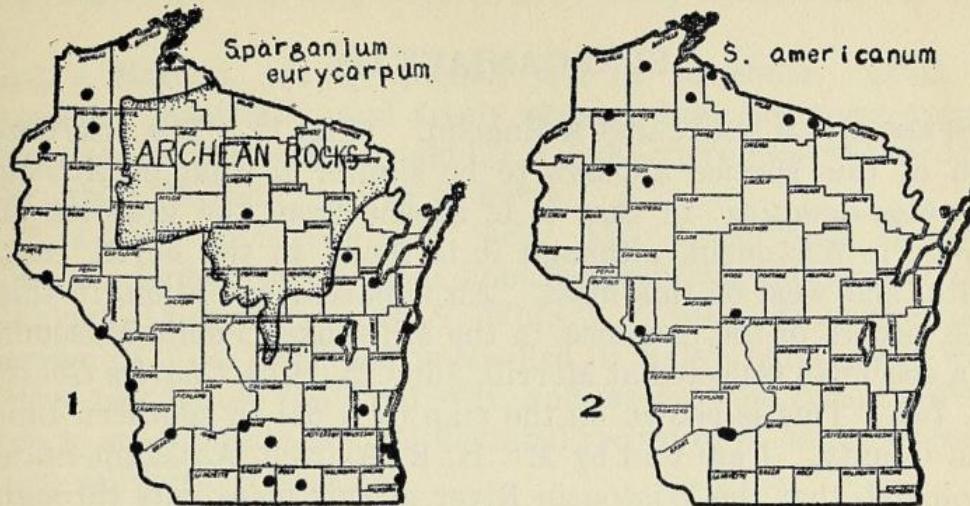

Kevin A. Swagel #681

12 June 2011

(Good) modern labels:

- Scientific name & author
- Locality and coordinates, elevation
- Habitat characteristics and associated species
- Date
- Collector and who “determined” the collection
- Plant characteristics: rarity, color, growth notes, etc.

What is the Wisconsin flora?

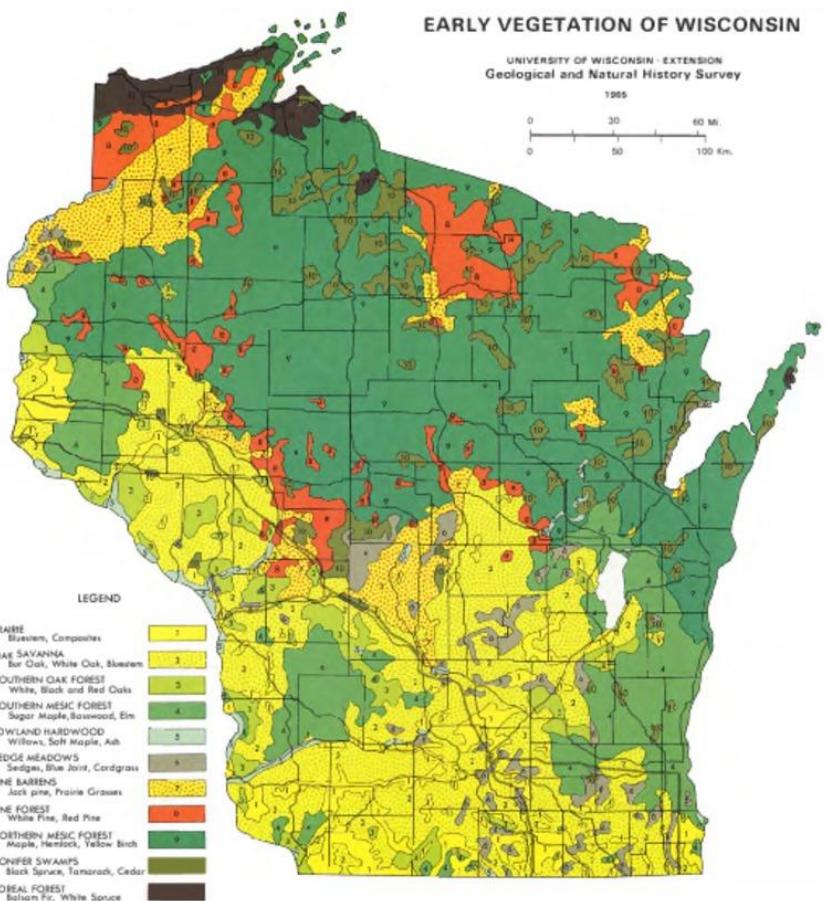

Wisconsin at a glance

- Region: Midwest,
Upper Great Lakes
- 65,000+ sq miles area
- Approx 5.9 million
people (20th)
- Climate: mostly warm-
summer humid
continental (*Dfb*)
- Historical homeland of
the Ojibwa, Sauk, Fox,
Kickapoo, and
Potawatomie

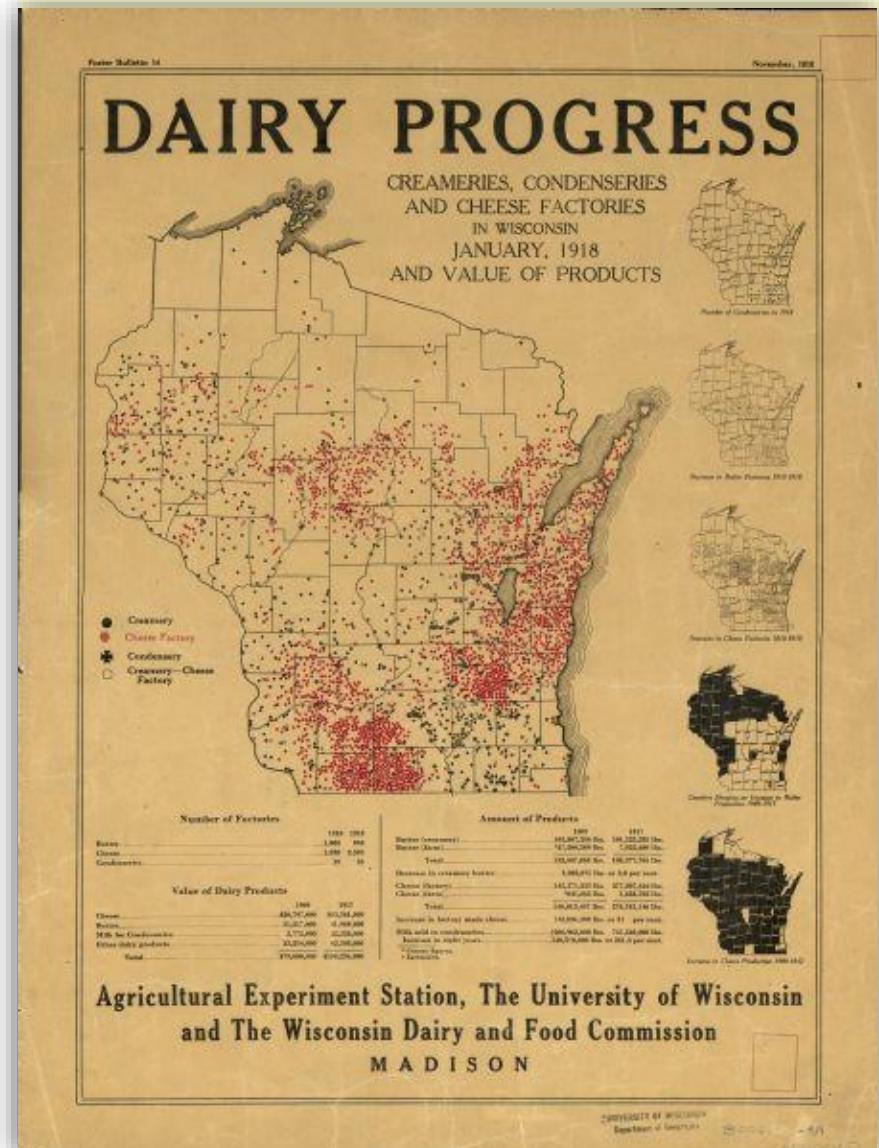

EXTENT OF PLEISTOCENE ICE SHEETS IN THE NORTHERN UNITED STATES

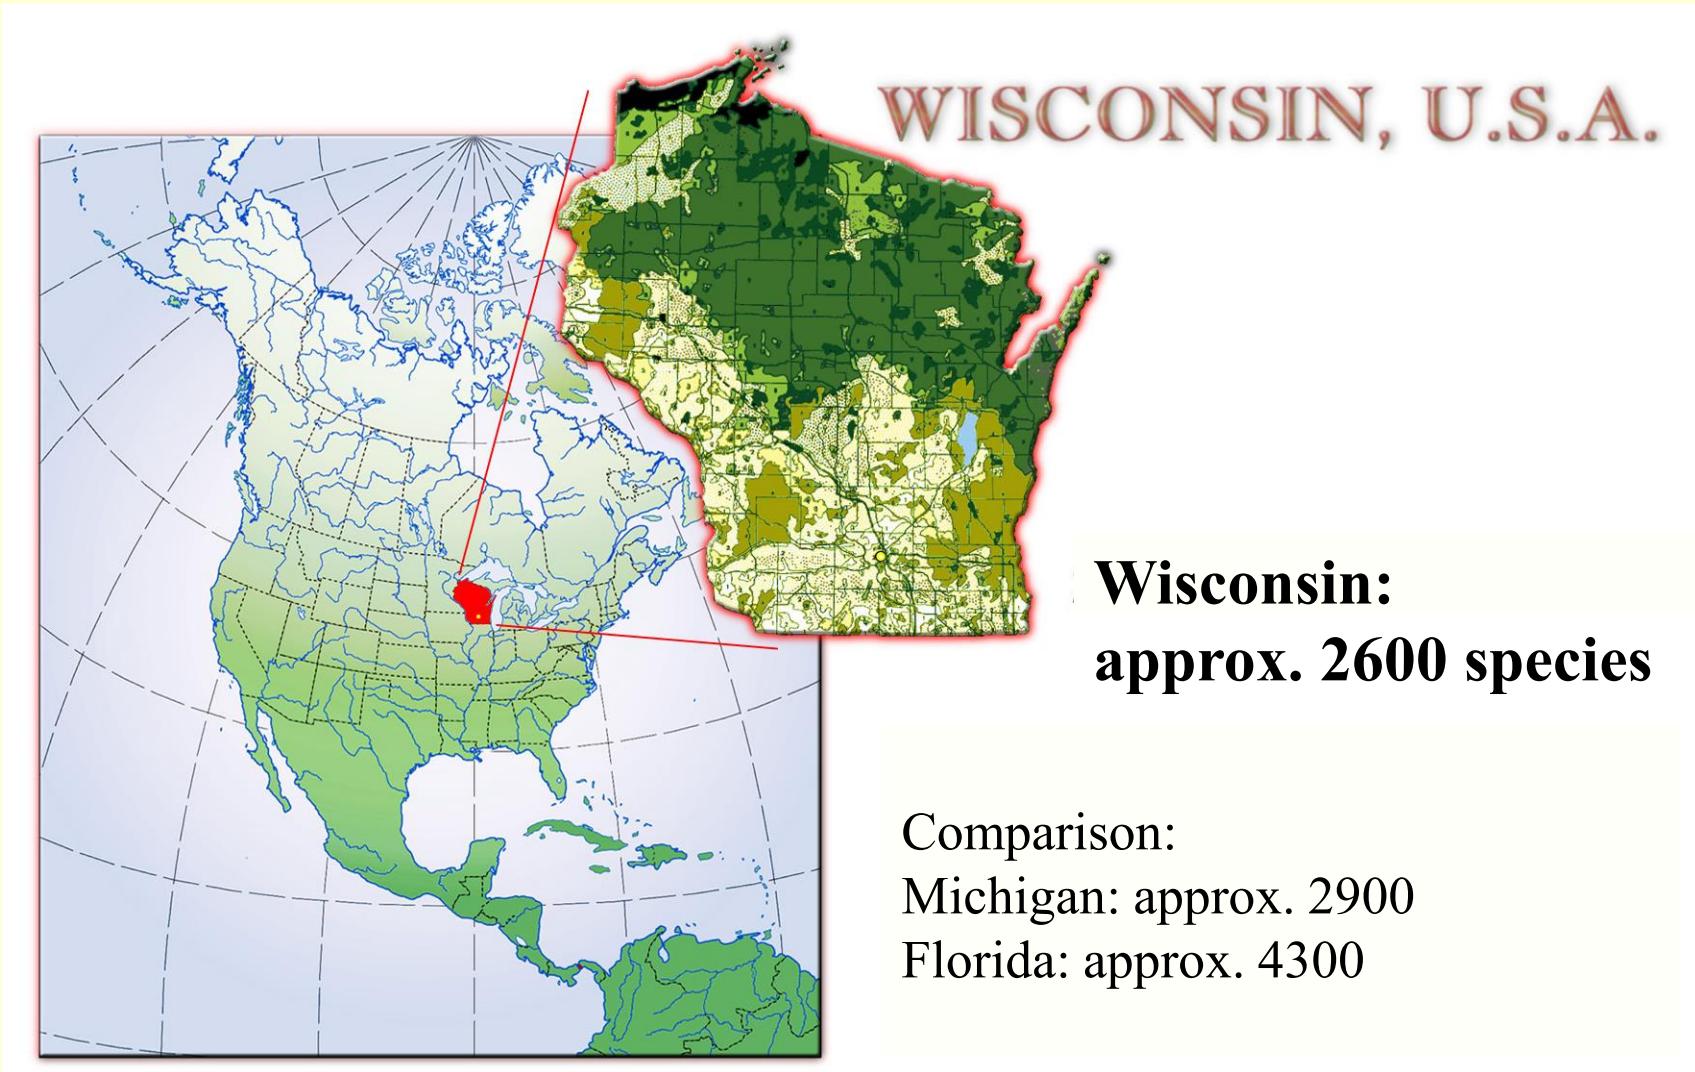

Wisconsin's flora and plant communities heavily influenced by glaciation history...

... and by humans!

Vascular Flora of Wisconsin

What is a “vascular flora”?

- Marchantiophyta – liverworts
 - Bryophyta – mosses
 - Anthoceratophyta - hornworts
 - Lycopodiophyta - spike & club mosses
 - Polypodiophyta – ferns & horsetails
 - Pinophyta - gymnosperms
 - Magnoliophyta - angiosperms, flowering plants
- 
- non-vascular
- vascular

More on the classification and evolution of plants in our next lecture!

We will still find time to include the non-vascular plants any, when possible!

Vascular Flora of Wisconsin

Information source: Wisconsin State Herbarium
herbarium.wisc.edu/

Arethusa bulbosa
Dragon's mouth orchid

Native species = 1,659

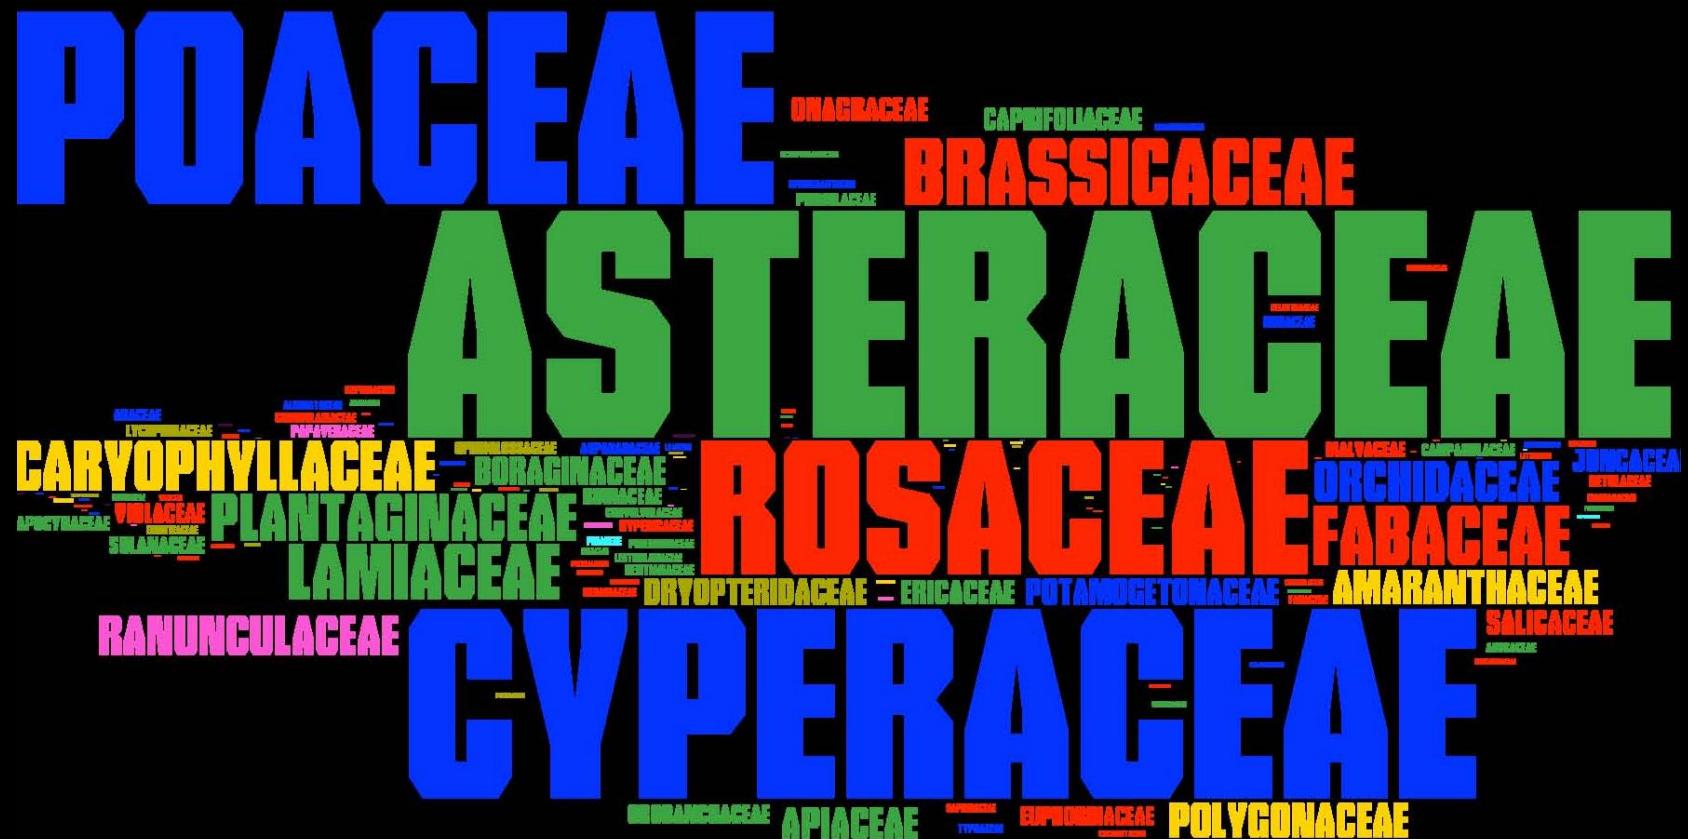

Alliaria petiolata
Garlic mustard

Introduced species = 791

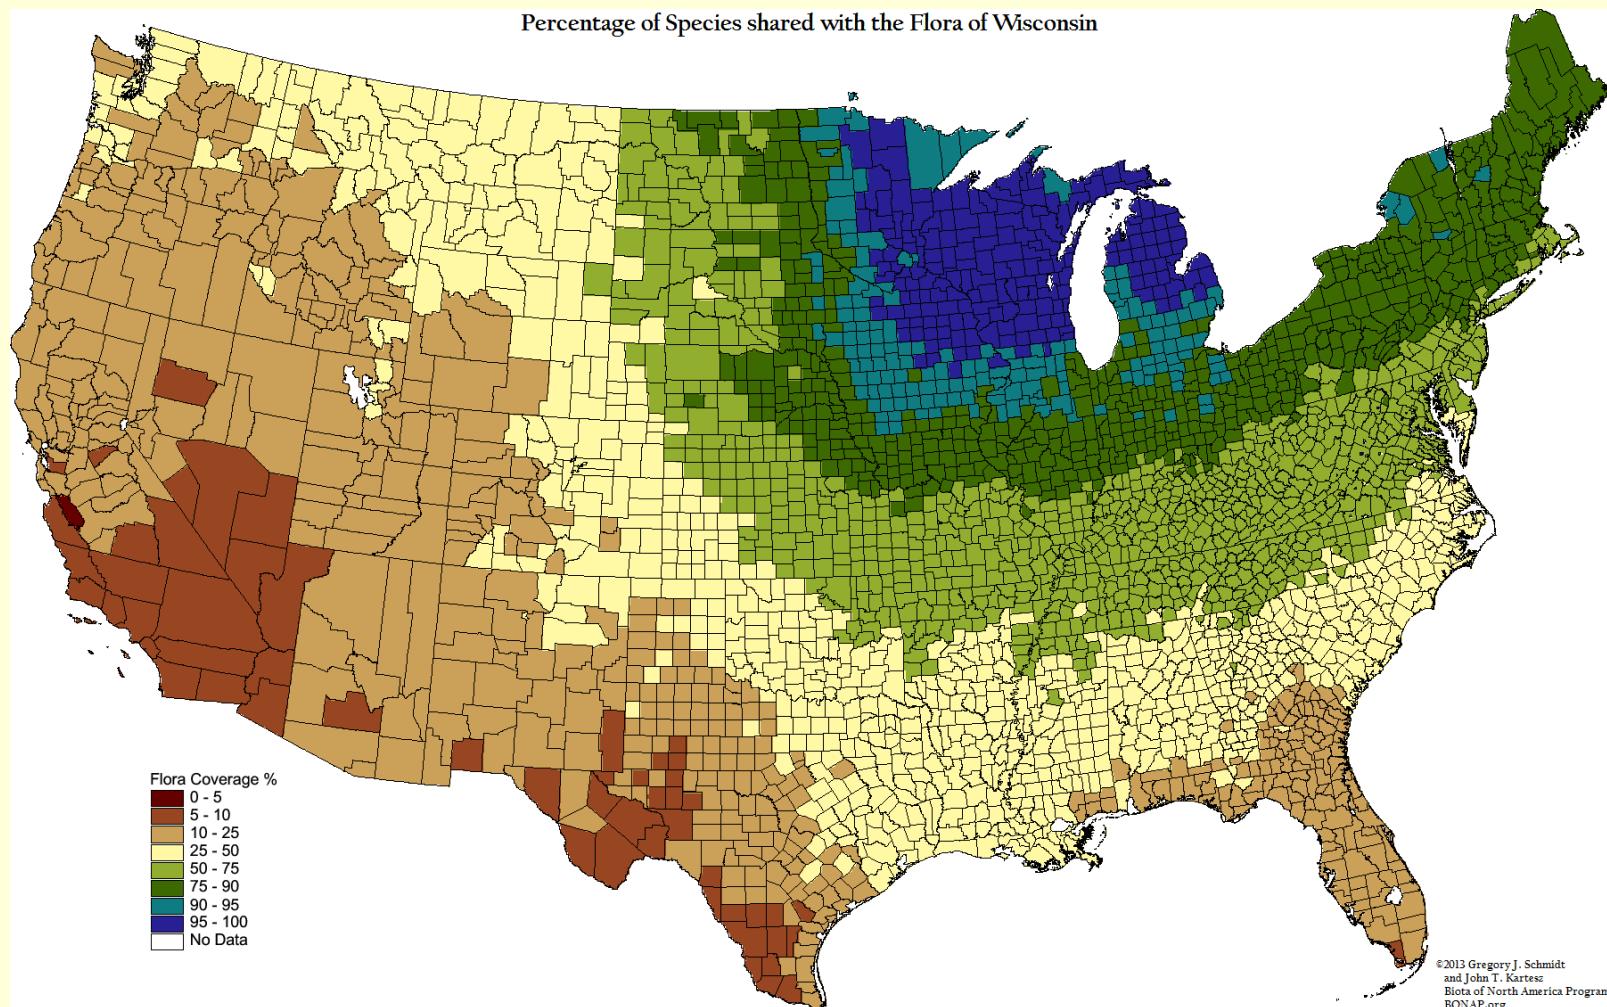

164 families 787 genera 2,450 species

Not all plant families in Wisconsin are equally represented!

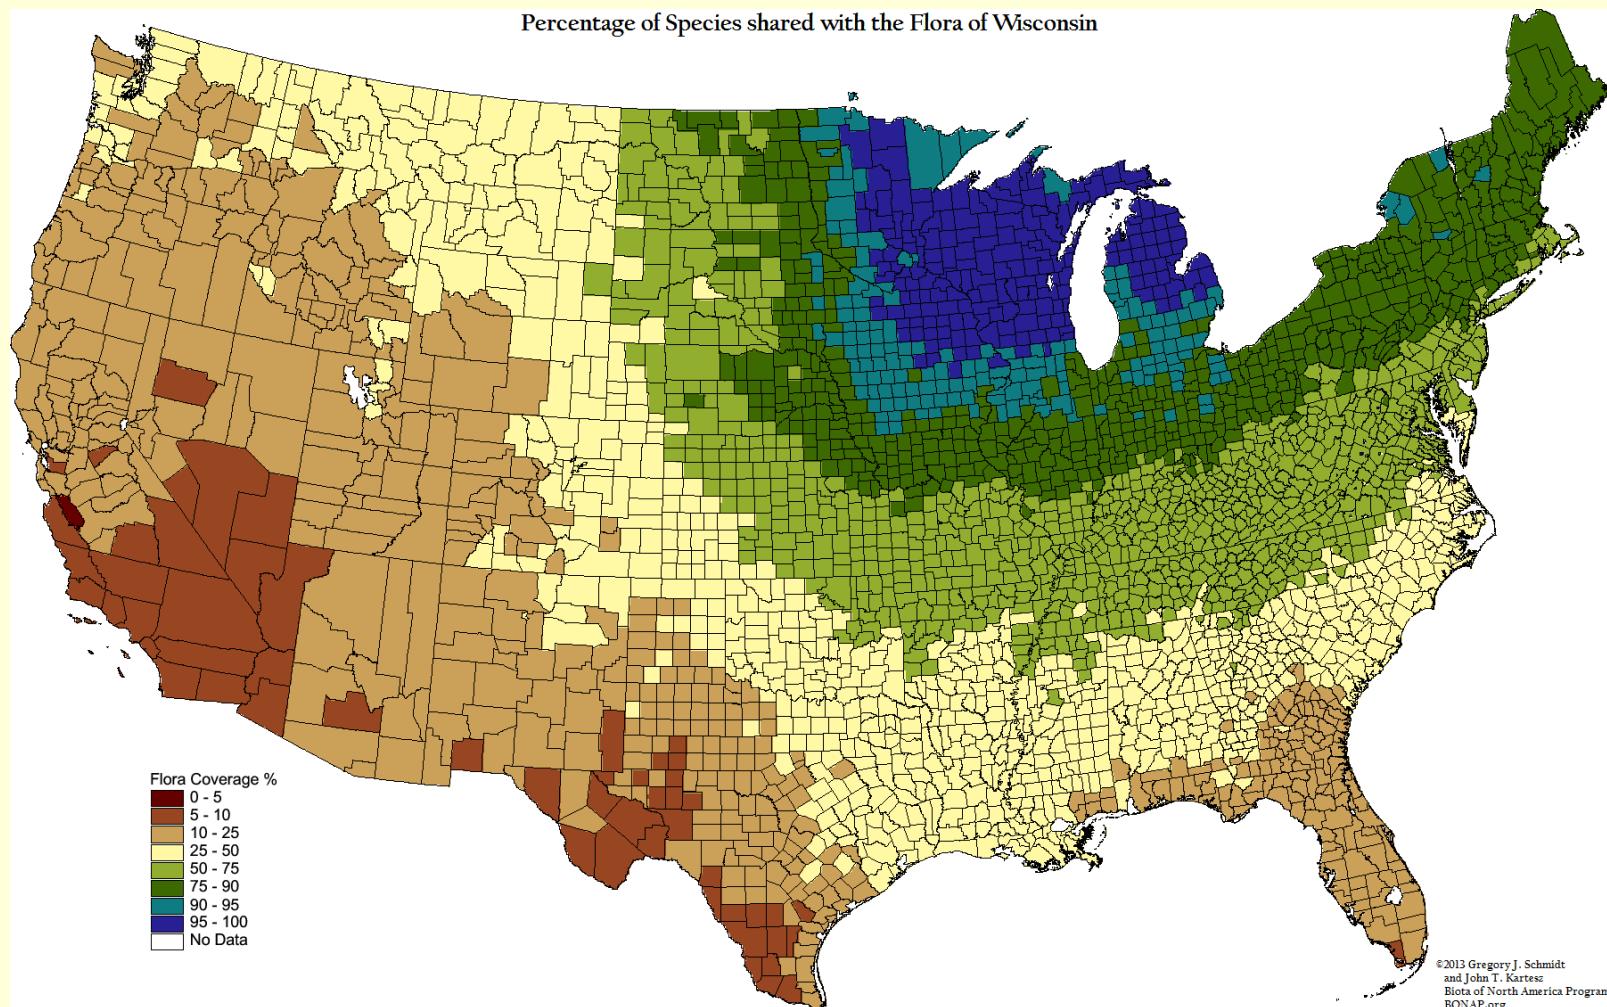

Floristic elements and provinces

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range.

Floristic elements and provinces

Floristic **elements** give some idea to us about how the flora of Wisconsin was assembled biologically over time

Floristic elements and provinces

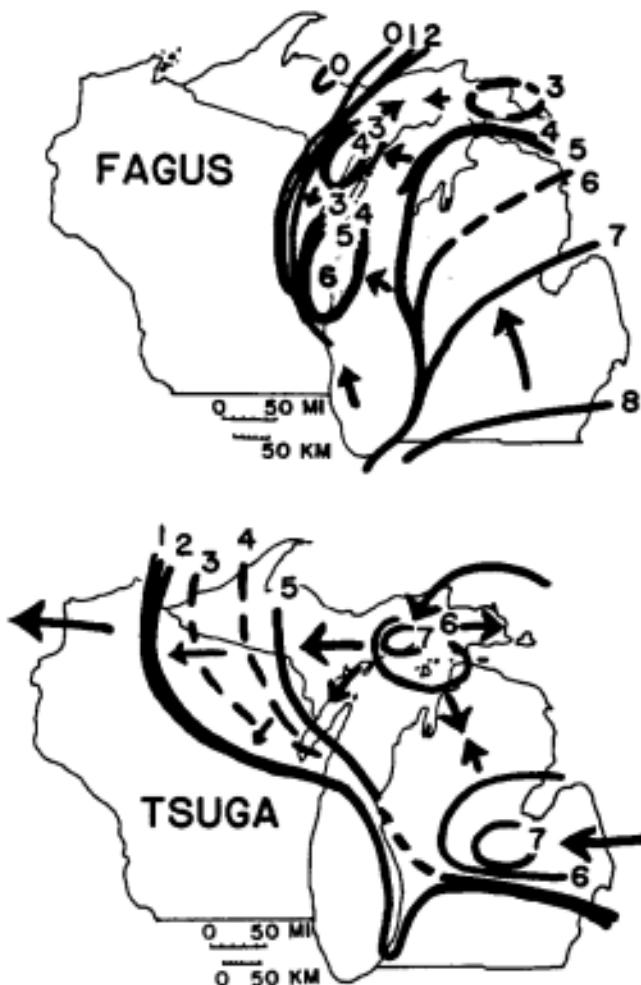

Fig. 5. Simplified reconstruction of the expansion of *Fagus* and *Tsuga* into the Upper Great Lakes Region. Lines show the position of the species limit at 1000-yr intervals.

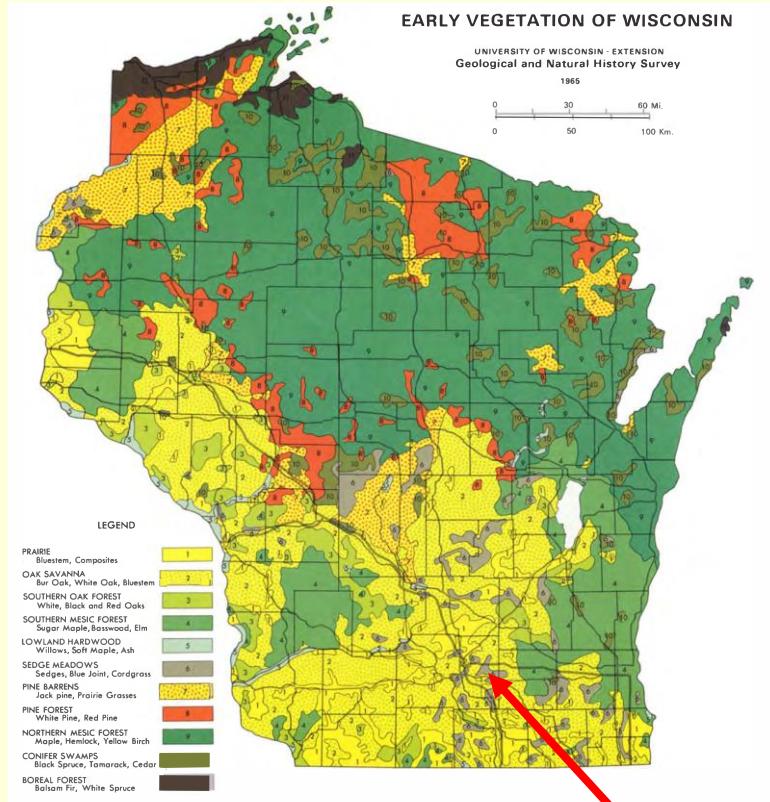

Palynological (pollen) data gives us more evidence, showing roughly the route some plants took to colonize Wisconsin following glacial retreat

L: Davis et al., 1986

Floristic elements and provinces

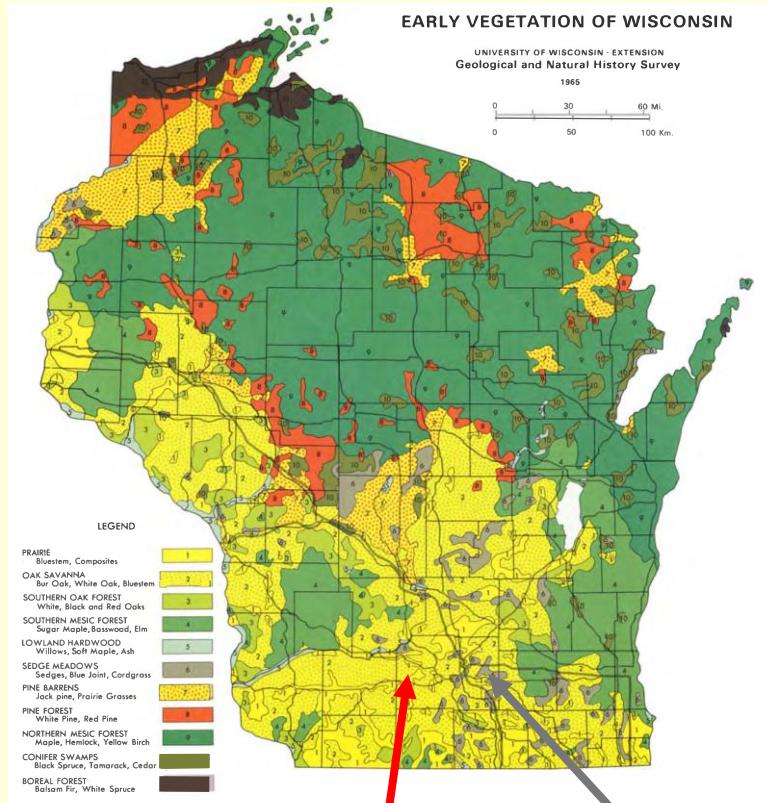

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range. The 4 most important are:

1. Alleghenian: group of species with ranges centered from Cumberland, Appalachians/Great Smoky mountains; dominant in deciduous forests; e.g., white pine, hemlock and basswood; ancient element extending back to the Tertiary

Floristic elements and provinces

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range. The 4 most important are:

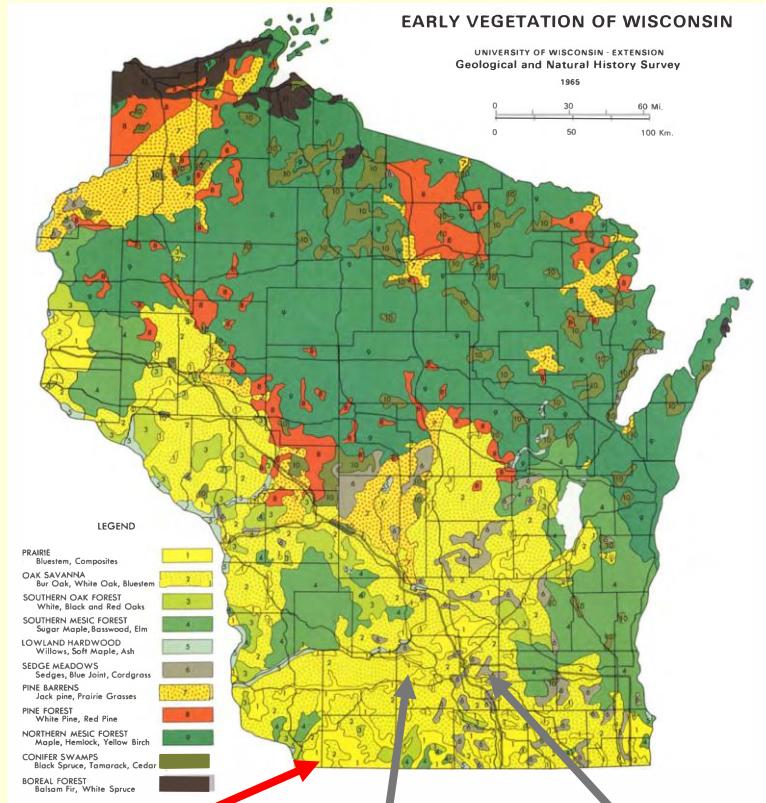

1. Alleghenian: group of species with ranges centered from Cumberland, Appalachians/Great Smoky mountains; dominant in deciduous forests; e.g., white pine, hemlock and basswood; ancient element extending back to the Tertiary

2. Ozarkian: species grouped around the Ozark Mts. of Arkansas and Missouri; more adapted to xeric or dry conditions, but similar to Alleghenian (many genera, but not species overlapping between the two elements); e.g., bur oak and black oak, hickory

Floristic elements and provinces

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range. The 4 most important are:

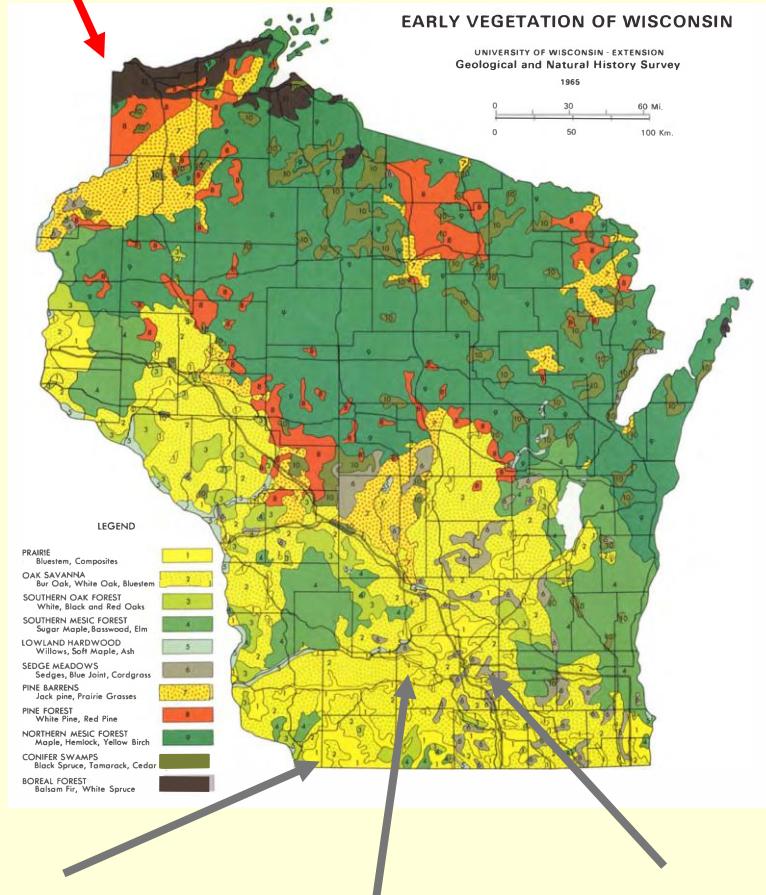

1. Alleghenian: group of species with ranges centered from Cumberland, Appalachians/Great Smoky mountains; dominant in deciduous forests; e.g., white pine, hemlock and basswood; ancient element extending back to the Tertiary

2. Ozarkian: species grouped around the Ozark Mts. of Arkansas and Missouri; more adapted to xeric or dry conditions, but similar to Alleghenian (many genera, but not species overlapping between the two elements); e.g. bur oak and black oak, hickory

3. Prairie: species whose ranges includes all or part of existing prairies e.g., needle grass, big bluestem

Floristic elements and provinces

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range. The 4 most important are:

1. Alleghenian: group of species with ranges centered from Cumberland, Appalachians/Great Smoky mountains; dominant in deciduous forests; e.g., white pine, hemlock and basswood; ancient element extending back to the Tertiary

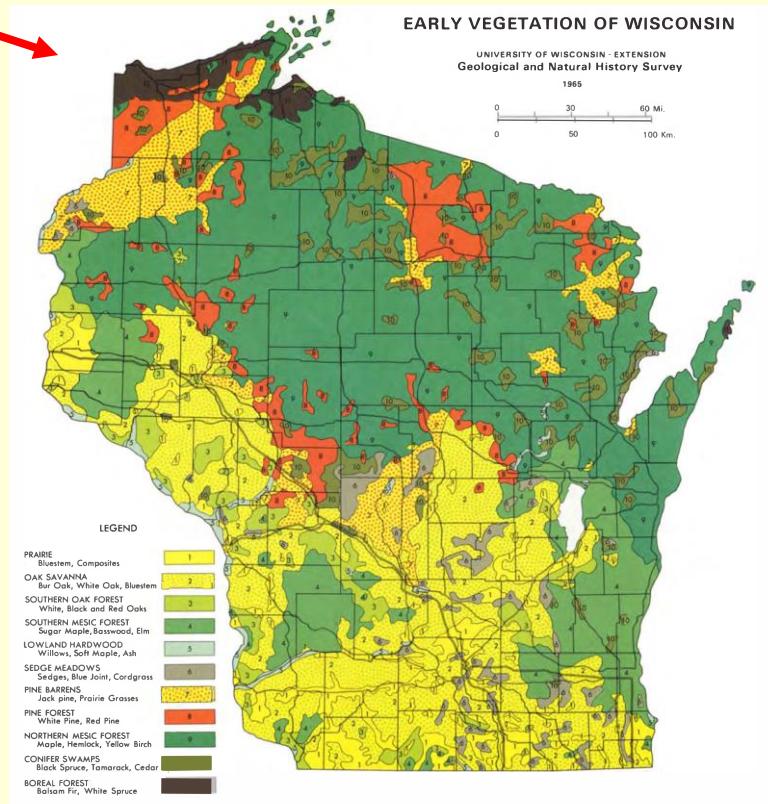

2. Ozarkian: species grouped around the Ozark Mts. of Arkansas and Missouri; more adapted to xeric or dry conditions, but similar to Alleghenian (many genera, but not species overlapping between the two elements); e.g. bur oak and black oak, hickory

3. Prairie: species whose ranges includes all or part of existing prairies e.g. needle grass, side oats

4. Boreal: species w/ranges from Alaska to Upper Great Lakes, many species circumboreal (with ranges in Eurasia) e.g., tamarack, white spruce, and balsam fir

Floristic elements and provinces

The flora of WI can be divided into a number of **elements**, each of which shares a common type of past and/or current geographical range. The 4 most important are:

Other smaller elements too!

Coastal plains (Gulf, Atlantic coast)

Western North America

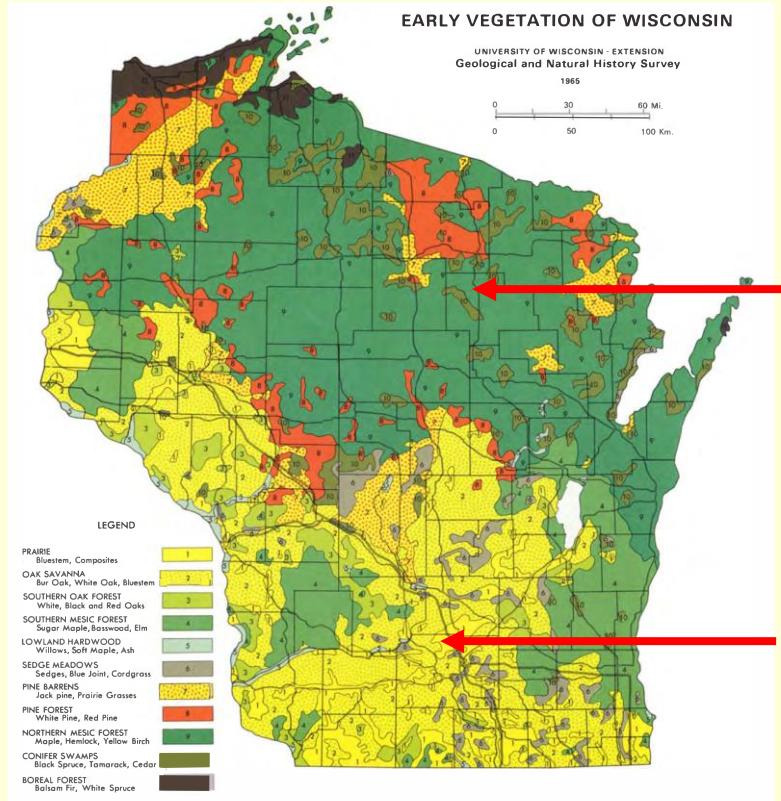

Eurasian weeds

Arctic

Driftless or Great Lakes endemics

Floristic elements and provinces

These floristic elements are not distributed uniformly throughout the state.
There are 2 **floristic provinces**:

Northern Hardwoods - NE Wisconsin

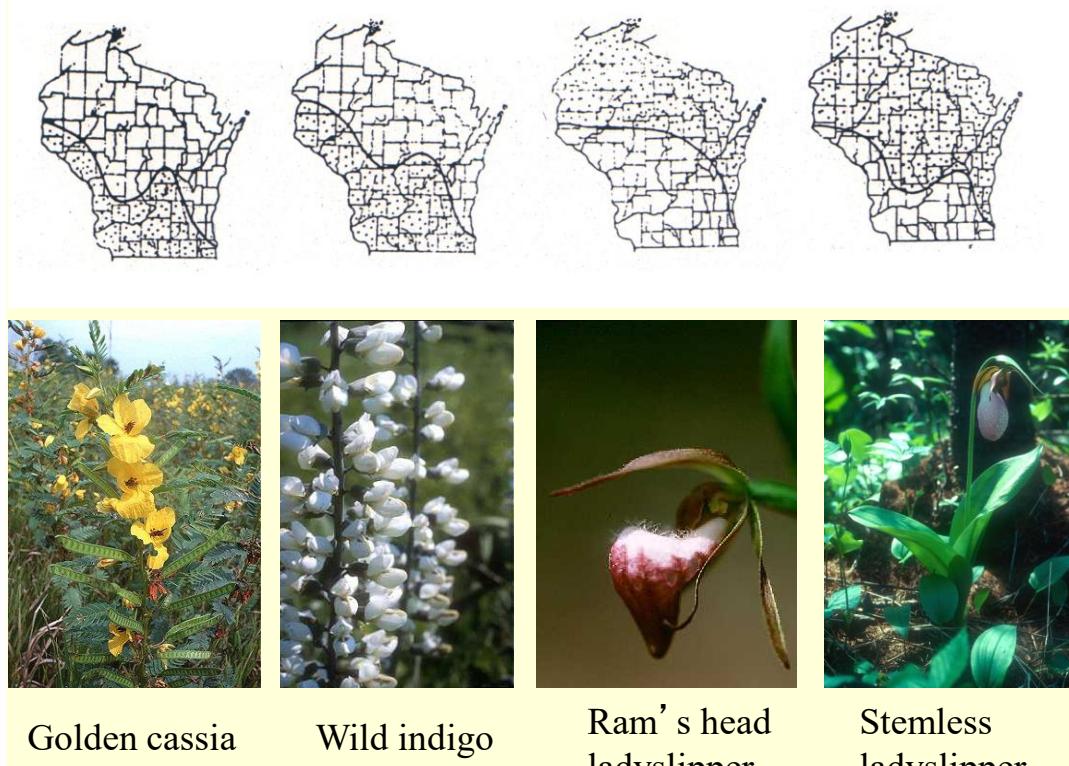

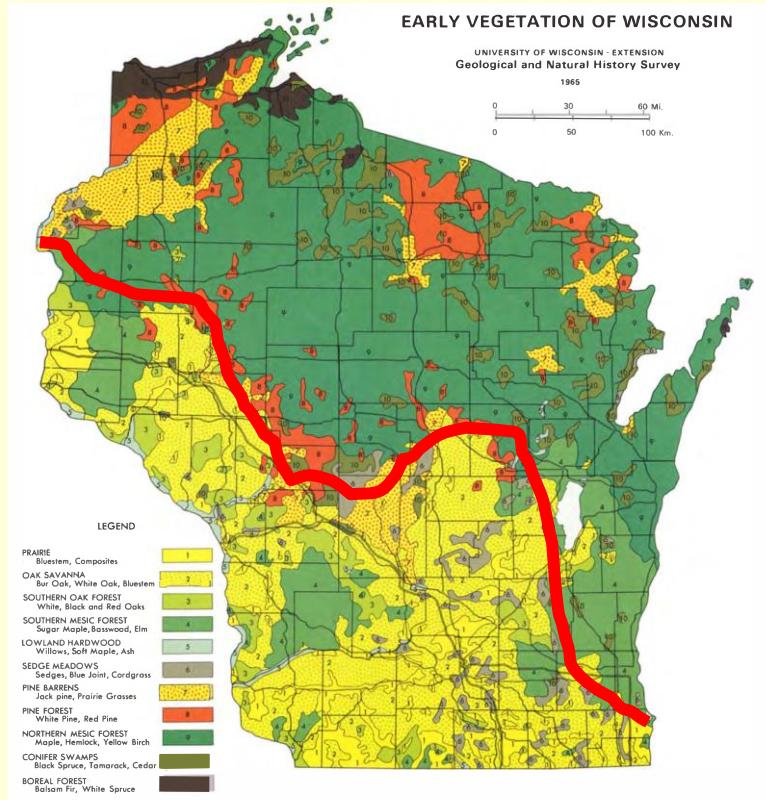

most Boreal elements, some Alleghenian elements

Prairie-Forest - SW Wisconsin

most Prairie & Ozarkian, some Alleghenian elements

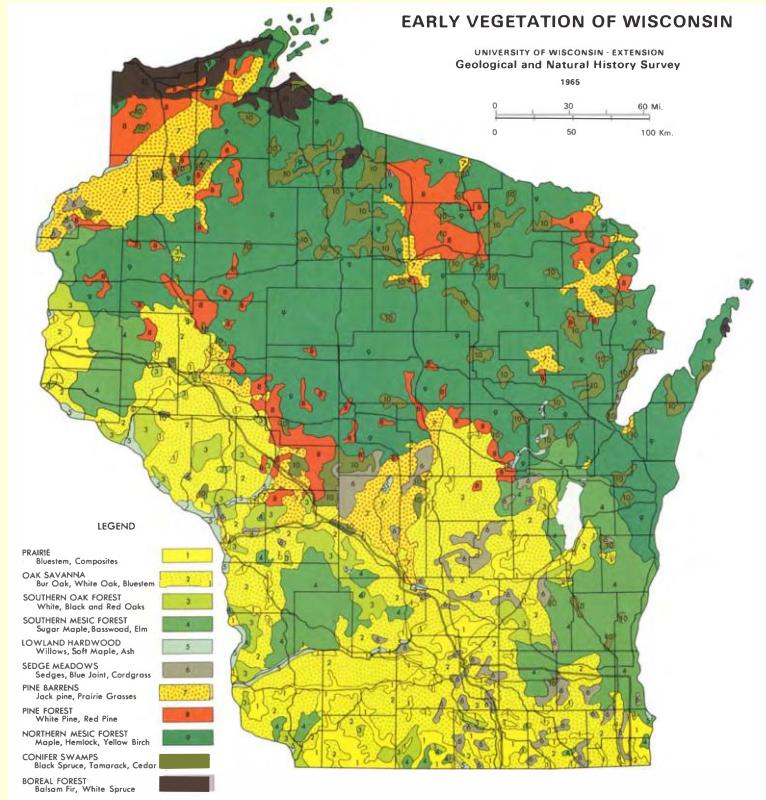

Floristic elements and provinces

The 2 provinces are separated by a narrow band or zone: **tension zone** which is based on the upper and lower limits of the southwest and northeastern species, respectively.

Plant Communities

Within each province, there are ecological (not floristic) assemblages of species called **plant communities**. John Curtis in the *Vegetation of Wisconsin*, described about 35 communities

Some examples:

Southern dry, mesic, wet forests

Northern dry, mesic, wet forests

Oak savanna

Poor or rich fens, bogs, other wetlands

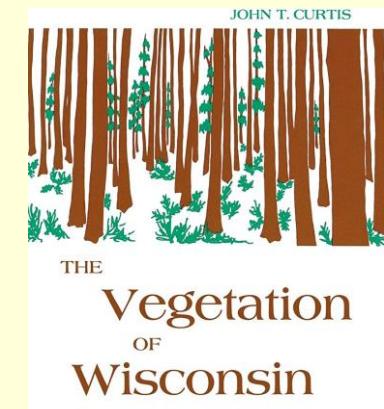

Dune

Talus slope, cliff

Oak and pine barrens

Dry, mesic, wet, or sand prairies

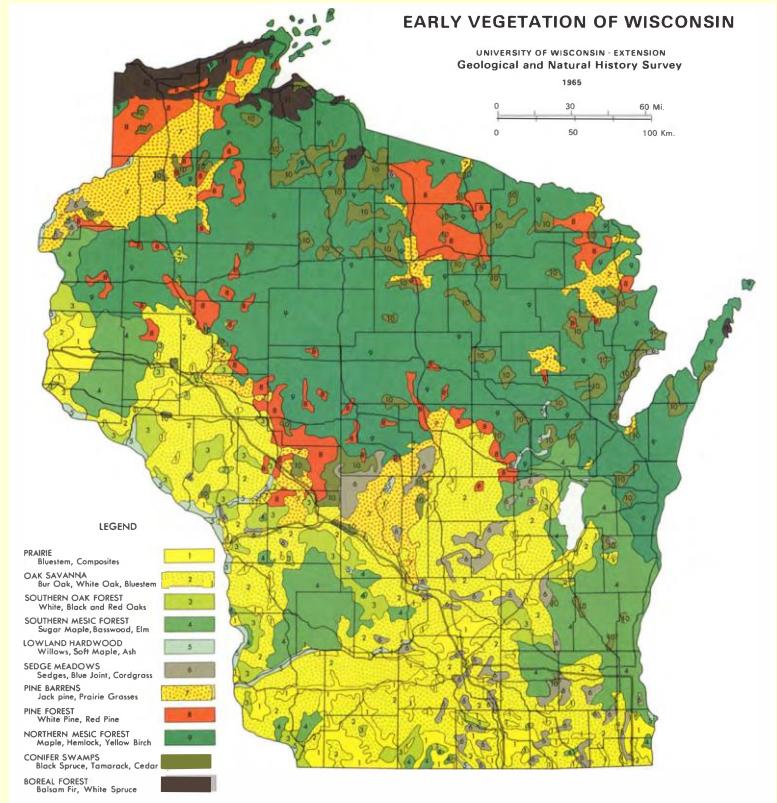

More on the plant
communities in
Wisconsin in a future
lecture!

Where we go from here:

General lecture units:

1. Floristics, Wisconsin geography, natural communities
2. Practical plant identification skills: basic morphology and structure
3. Wisconsin plants: family and identification characteristics

Link in Canvas to our class page

Will use today in Lab (bring laptop and/or phone and a notebook)

The screenshot shows the iNaturalist website interface for a specific project. At the top, there's a navigation bar with links for "Search", "Explore", "Your Observations", "Community", "Identify", "More", "Upload" (with a green button), and user notifications (3 messages, 0 comments). A user profile icon is also visible.

The main content area features a large banner image of a grassy field with yellow flowers under a blue sky. Overlaid on this image is the project title "Botany 401 - Vascular Flora of Wisconsin, Summer 20..." and the date range "MAY 30, 2023 - JUN 25, 2023".

To the right of the banner, there's an "About" section with a red background. It includes a "Members" count of 2, a description of the project as a repository for observations of students at the University of Wisconsin-Madison, and a link to "Read More". There's also a "Your Membership" button and a "Edit Project" button.

At the bottom of the page, there are summary statistics: "Overview" (selected), "0 OBSERVATIONS", "0 SPECIES", "0 IDENTIFIERS", "0 OBSERVERS", and a "Stats" button.

Botany 401

Vascular Flora of Wisconsin

Enjoy!
